The Open Group Technical Standard
Base Specifications, Issue 6

## 1003.1<sup>™</sup>-2001/Cor 1-2001

## Standard for Information Technology — Portable Operating System Interface (POSIX®)

## **Technical Corrigendum 1**

Sponsor

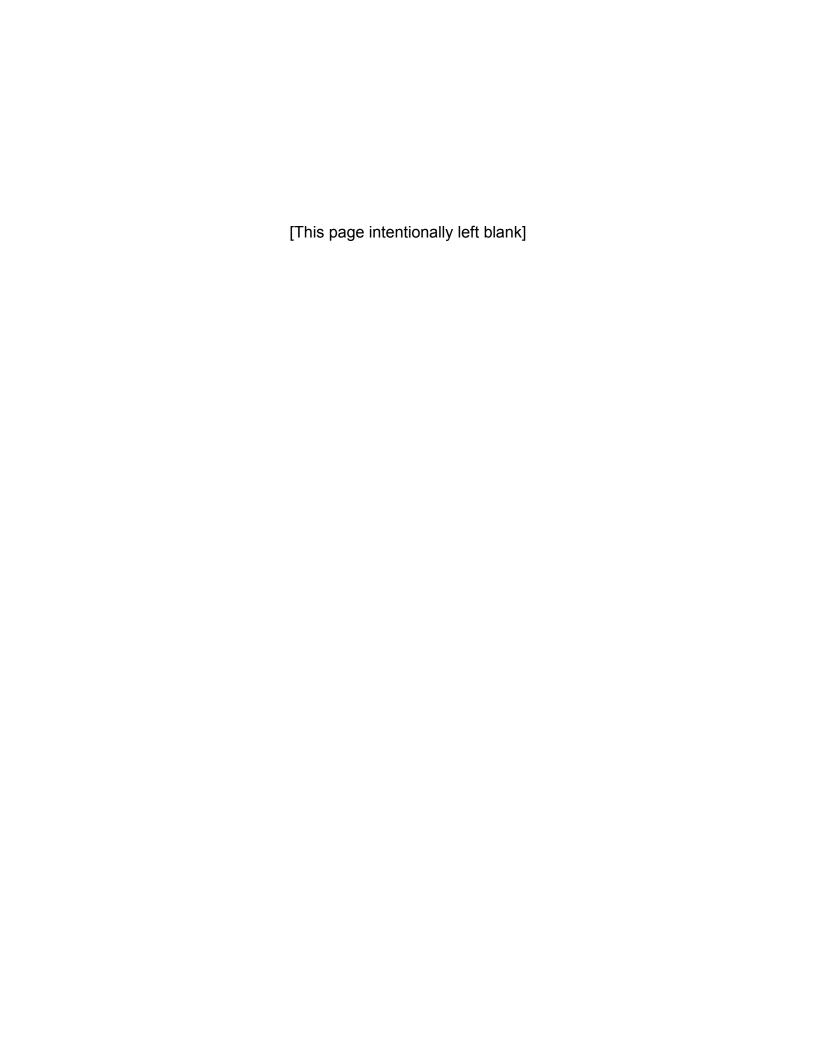

Portable Applications Standards Committee of the IEEE Computer Society

and

The Open Group

#### **Abstract**

This Technical Corrigendum addresses problems discovered since the approval of The Open Group Base Specifications, Issue 6, IEEE Std 1003.1-2001, and ISO/IEC 9945:2002. These are mainly due to resolving integration issues raised by the merger of the original Base documents.

#### Keywords

application program interface (API), argument, asynchronous, basic regular expression (BRE), batch job, batch system, built-in utility, byte, child, command language interpreter, CPU, extended regular expression (ERE), FIFO, file access control mechanism, input/output (I/O), job control, network, portable operating system interface (POSIX $^{\circledR}$ ), parent, shell, stream, string, synchronous, system, thread, X/Open System Interface (XSI)

All rights reserved. No part of this publication may be reproduced in any form, in an electronic retrieval system or otherwise, without prior written permission from both the IEEE and The Open Group.

Portions of this standard are derived with permission from copyrighted material owned by Hewlett-Packard Company, International Business Machines Corporation, Novell Inc., The Open Software Foundation, and Sun Microsystems, Inc.

#### **Permissions**

Authorization to photocopy portions of this standard for internal or personal use is granted provided that the appropriate fee is paid to the Copyright Clearance Center or the equivalent body outside of the U.S. Permission to make multiple copies for educational purposes in the U.S. requires agreement and a license fee to be paid to the Copyright Clearance Center.

Beyond these provisions, permission to reproduce all or any part of this standard must be with the consent of both copyright holders and may be subject to a license fee. Both copyright holders will need to be satisfied that the other has granted permission. Requests to the copyright holders should be sent by email to <code>austin-group-permissions@opengroup.org</code>.

#### **Feedback**

This standard has been prepared by the Austin Group. Feedback relating to the material contained in this standard may be submitted using the Austin Group web site at <a href="http://www.opengroup.org/austin/defectform.html">http://www.opengroup.org/austin/defectform.html</a>.

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

Use of an IEEE Standard is wholly voluntary. The IEEE disclaims liability for any personal injury, property, or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon this, or any other IEEE Standard document.

The IEEE does not warrant or represent the accuracy or content of the material contained herein, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained herein is free from patent infringement. IEEE Standards documents are supplied "AS IS".

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

In publishing and making this document available, the IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is the IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing this, and any other IEEE Standards document, should rely upon the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of the IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with the IEEE.<sup>1</sup> Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE-SA Standards Board, 445 Hoes Lane, P.O. Box 1331, Piscataway, NJ 08855-1331, U.S.A.

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE Standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

A patent holder has filed a statement of assurance that it will grant licenses under these rights without compensation or under reasonable rates and non-discriminatory, reasonable terms and conditions to all applicants desiring to obtain such licenses. The IEEE makes no representation as to the reasonableness of rates and/or terms and conditions of the license agreements offered by patent holders. Further information may be obtained from the IEEE Standards Department.

Authorization to photocopy portions of any individual standard for internal or personal use is granted in the U.S. by the Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to the Copyright Clearance Center. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center. To arrange for payment of the licensing fee, please contact:

Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923, U.S.A., Tel.: +1 978 750 8400

Amendments, corrigenda, and interpretations for this standard, or information about the IEEE standards development process, may be found at <a href="http://standards.ieee.org">http://standards.ieee.org</a>.

Full catalog and ordering information on all IEEE publications is available from the IEEE Online Catalog & Store at http://shop.ieee.org/store.

<sup>1.</sup> For this standard, please send comments via the Austin Group as requested on page iii.

<sup>2.</sup> Please refer to the special provisions for this standard on page iii concerning permissions from both copyright holders and arrangements to cover photocopying and reproduction across the world, as well as by commercial organizations wishing to license the material for use in product documentation.

#### The Open Group

The Open Group, a vendor and technology-neutral consortium, is committed to delivering greater business efficiency by bringing together buyers and suppliers of information technology to lower the time, cost, and risks associated with integrating new technology across the enterprise.

The Open Group's mission is to offer all organizations concerned with open information infrastructures a forum to share knowledge, integrate open initiatives, and certify approved products and processes in a manner in which they continue to trust our impartiality.

In the global eCommerce world of today, no single economic entity can achieve independence while still ensuring interoperability. The assurance that products will interoperate with each other across differing systems and platforms is essential to the success of eCommerce and business workflow. The Open Group, with its proven testing and certification program, is the international guarantor of interoperability in the new century.

The Open Group provides opportunities to exchange information and shape the future of IT. The Open Group's members include some of the largest and most influential organizations in the world. The flexible structure of The Open Groups membership allows for almost any organization, no matter what their size, to join and have a voice in shaping the future of the IT world.

More information is available on The Open Group web site at http://www.opengroup.org.

The Open Group has over 15 years' experience in developing and operating certification programs and has extensive experience developing and facilitating industry adoption of test suites used to validate conformance to an open standard or specification. The Open Group portfolio of test suites includes the *Westwood* family of tests for this standard and the associated certification program for Version 3 of the Single UNIX Specification, as well tests for CDE, CORBA, Motif, Linux, LDAP, POSIX.1, POSIX.2, POSIX Realtime, Sockets, UNIX, XPG4, XNFS, XTI, and X11. The Open Group test tools are essential for proper development and maintenance of standards-based products, ensuring conformance of products to industry-standard APIs, applications portability, and interoperability. In-depth testing identifies defects at the earliest possible point in the development cycle, saving costs in development and quality assurance.

More information is available at http://www.opengroup.org/testing.

The Open Group publishes a wide range of technical documentation, the main part of which is focused on development of Technical and Product Standards and Guides, but which also includes white papers, technical studies, branding and testing documentation, and business titles. Full details and a catalog are available at <a href="http://www.opengroup.org/pubs">http://www.opengroup.org/pubs</a>.

As with all *live* documents, Technical Standards and Specifications require revision to align with new developments and associated international standards. To distinguish between revised specifications which are fully backwards compatible and those which are not:

- A new *Version* indicates there is no change to the definitive information contained in the previous publication of that title, but additions/extensions are included. As such, it *replaces* the previous publication.
- A new *Issue* indicates there is substantive change to the definitive information contained in the previous publication of that title, and there may also be additions/extensions. As such, both previous and new documents are maintained as current publications.

Readers should note that Corrigenda may apply to any publication. Corrigenda information is published at <a href="http://www.opengroup.org/corrigenda">http://www.opengroup.org/corrigenda</a>.

Full catalog and ordering information on all Open Group publications is available at http://www.opengroup.org/pubs.

# Participants

IEEE Std 1003.1-2001/Cor 1-2002 was prepared by the Austin Group, sponsored by the Portable Applications Standards Committee of the IEEE Computer Society, The Open Group, and ISO/IEC JTC 1/SC22/WG15.

#### **The Austin Group**

At the time of approval, the membership of the Austin Group was as follows:

Andrew Josey, Chair
Donald W. Cragun, Organizational Representative, IEEE PASC
Nicholas Stoughton, Organizational Representative, ISO/IEC JTC 1/SC22/WG15
Mark Brown, Organizational Representative, The Open Group
Cathy Fox, Technical Editor

#### **The Open Group**

When The Open Group approved the Base Specifications, Issue 6, Technical Corrigendum 1 on 7 February 2003, the membership of The Open Group Base Working Group was as follows:

Andrew Josey, Chair Finnbarr P. Murphy, Vice-Chair Mark Brown, Austin Group Liaison Cathy Fox, Technical Editor

#### **Base Working Group Members**

Mark BrownJoanna FarleyDave ButenhofAndrew GollanDonald W. CragunFinnbarr P. MurphyLarry DwyerFrank PrindleUlrich DrepperAndrew K. Roach

Curtis Royster Jr. Nicholas Stoughton Kenjiro Tsuji

#### IEEE

When the IEEE Standards Board approved IEEE Std 1003.1-2001/Cor 1-2002 on 11 December 2002, the membership of the committees was as follows:

#### **Portable Applications Standards Committee (PASC)**

Lowell G. Johnson, Chair Joseph M. Gwinn, Vice-Chair Jay Ashford, Functional Chair Andrew Josey, Functional Chair Curtis Royster Jr., Functional Chair Nicholas Stoughton, Secretary

#### **Balloting Committee**

The following members of the balloting committee voted on IEEE Std 1003.1-2001/Cor 1-2002. Balloters may have voted for approval, disapproval, or abstention:

Alejandro Alonso Michael Gonzalez Charles Ngethe Peter Petrov Jay Ashford Scott Gudgel David J. Blackwood Charles E. Hammons Frank Prindle Julian Blake Bryan Harold Vikram Punj Mitchell Bonnett **Barry Hedguist** Francois Riche Mark Brown Karl Heubaum Curtis Royster Jr. Lowell G. Johnson Diane Schleicher Dave Butenhof **Keith Chow Andrew Josey** Stephen C. Schwarm Luis Cordova Kenneth Lang Gil Shultz Pi-Cheng Law Nicholas Stoughton Donald W. Cragun Steven J. #### **IEEE-SA Standards Board**

When the IEEE-SA Standards Board approved IEEE Std 1003.1-2001/Cor 1-2002 on 11 December 2002, the membership was as follows:

James T. Carlo, Chair James H. Gurney, Vice-Chair Judith Gorman, Secretary

Sid Bennett Arnold M. Greenspan Daleep C. Mohla H. Stephen Berger Raymond Hapeman William J. Moylan Malcolm V. Thaden Clyde R. Camp Donald M. Heirman Richard DeBlasio Richard H. Hulett Geoffrey O. Thompson Harold E. Epstein Lowell G. Johnson Howard L. Wolfman Julian Forster\* Joseph L. Koepfinger\* Don Wright

Howard M. Frazier Peter H. Lips
Toshio Fukuda Nader Mehravari

Also included are the following non-voting IEEE-SA Standards Board liaisons:

**Alan Cookson**, NIST Representative **Satish K. Aggarwal**, NRC Representative **Savoula Amanatidis**, IEEE Standards Managing Editor

<sup>\*</sup> Member Emeritus

### **Participants**

#### 1. Introduction

#### 1.1 Scope

This Technical Corrigendum addresses issues raised in defect reports and interpretation requests submitted up until August 15, 2002, that meet all of the following criteria: (a.) They are in the scope of the approved standard. (b.) They contain no new APIs (functions/utilities); however, they may add enumeration symbols, non-function #defines, and reserve additional namespaces. (c.) They address contradictions between different parts of the standard, or add consistency between the standard and overriding standards, or address security-related problems.

#### 2. Changes to Base Definitions

This section contains the set of changes to the original text of the Base Definitions.

```
0001 Change Number: XBD/TC1/D6/1 [XBD ERN 1]
     On Page: 2 Line: 69 Section: 1.1
0002
     In the list of legacy interfaces not carried forward, change from:
0003
0004
        "regcmp(),"
0005
     to:
0006
        "regcmp(), regex(),"
0007
     Change from:
0008
        "step(),"
0009
     to:
0010
        "step(), ttyslot(), valloc(),"
0011 Rationale: This change is for consistency with the long scope document.
0012
     Change Number: XBD/TC1/D6/2 [XBD ERN 3]
0013 On Page: 13 Line: 537 Section: 1.5.1
0014 In the Codes section, change from:
0015
        "Thread Stack Address Size"
0016 to:
0017
        "Thread Stack Size Attribute"
0018 On Page: 401 Line: 14133 Section: <unistd.h>
     Change from:
0019
        "Thread Stack Address Size"
0020
0021 to:
0022
        "Thread Stack Size Attribute"
```

```
0023 Change Number: XBD/TC1/D6/3 [bwq2002-001]
0024 On Page: 20 Line: 794-797 Section: 2.1.4.2
0025 In XSI Shell and Utilities Conformance, in the fifth bullet (describing
0026 the XSI Development Utilities option):
0027 Add "nm" to the list of utilities in the table on Lines 794-797.
0028 Change Number: XBD/TC1/D6/4 [XBD ERN 11]
0029 On Page: 100 Line: 3129 Section: 4.10
0030 In Memory Synchronization, add the following new paragraph in Section
0031 4.10 beneath the table of functions:
0032
        "The pthread once() function shall synchronize memory for the
0033
        first call in each thread for a given pthread_once_t object."
0034 Change Number: XBD/TC1/D6/5 [XBD ERN 13,14]
0035 On Page: 142 Line: 4882 Section: 7.3.3.1
0036 In the LC MONETARY Category of the POSIX locale, add after Line 4882:
0037
        int p cs precedes
       int_p_sep_by_space
0038
                             - 1
0039 int n cs precedes
                             -1
0040 int_n_sep_by_space
0041 int_p_sign_posn
                             -1
                              -1
0042 int_n_sign_posn
                              -1
0043 Add after Line 4902 (in the table on Page 143):
0044
      int_p_cs_precedes --
                                   N/A
                                            {CHAR MAX}
      int_p_sep_by_space -- N/A
int_n_cs_precedes -- N/A
int_n_sep_by_space -- N/A
                                            {CHAR MAX}
0045
                                                           - 1
0046
                                            {CHAR MAX}
                                                           -1
0047
                                            {CHAR MAX}
                                                           -1
      --
                                            {CHAR_MAX}
0048
                                    N/A
                                                           - 1
0049
                                    N/A
                                            {CHAR MAX}
0050 On Page: 156 Line: 5477 Section: 7.4.2
0051 Add after Line 5477:
        | 'int_p_cs_precedes' | 'int_p_sep_by_space'
| 'int_n_cs_precedes' | 'int_n_sep_by_space'
| 'int_p_sign_posn' | 'int_n_sign_posn'
0052
0053
0054
0055 Rationale: The LC_MONETARY int_[np]_* values are missing from the POSIX
0056 locale definition.
0057 Change Number: XBD/TC1/D6/6 [Defect raised at May 2002 Plenary]
0058 On Page: 140 Line: 4787-4792 Section: 7.3.3, LC MONETARY
0059 Change from:
0060
        int curr symbol
                         The international currency symbol. The operand shall
0061
                          be a four-character string, with the first three
0062
                          characters containing the alphabetic international
0063
                          currency symbol in accordance with those specified in
0064
                          the ISO 4217:1995 standard. The fourth character
                          shall be the character used to separate the
0065
```

```
0066
                         international currency symbol from the monetary
0067
                         quantity.
0068 to:
0069
       int_curr_symbol The international currency symbol. The operand shall
                         be a four-character string, with the first three
0071
                         characters containing the alphabetic international
0072
                         currency symbol. The international currency symbol
0073
                         should be chosen in accordance with those specified
0074
                         in the ISO 4217 standard. The fourth character shall
                        be the character used to separate the international
0075
0076
                         currency symbol from the monetary quantity.
0077 Rationale: The text as written with the reference to ISO 4217:1995 did
0078 not allow for the Euro. The correction is stated using the term
0079 "should" intentionally, in order to make this a recommendation
0080 rather than a restriction on implementations. This allows for
0081 flexibility in implementations on how they handle future currency
0082 symbol additions. The approval year of the ISO 4217 standard is
0083 intentionally omitted to allow for future versions.
0084 Change Number: XBD/TC1/D6/7 [XBD ERN 16]
0085 On Page: 164 Line: 5797 Section: 8.3
0086 In the TZ Environment variable, change from:
0087
        "The contents of the environment variable named TZ shall be used by
        the ctime(), localtime(), strftime(), and mktime() functions ..."
0088
0089 to:
0090
       "The contents of the environment variable named TZ shall be used by
       the ctime(), localtime(), strftime(), mktime(),
       [Shade on]ctime r(), and localtime r()[Shade off] functions ..."
0092
0093 [Editorial Note: The shading denoted in [] should be marked with
0094 the TSF margin code.]
0095 Rationale: The description of the TZ environment variable omits the
0096 names of some functions which are defined as using it; specifically,
0097 the thread-safe variants of the ctime() and localtime() functions.
0098 Change Number: XBD/TC1/D6/8 [XBD ERN 20]
0099 On Page: 236 Line: 8313 Section: <glob.h>
0100 Change from:
0101
       int glob(const char *restrict, int,
0102
               int (*restrict)(const char *, int), glob_t *restrict);
0103 to:
       int glob(const char *restrict, int, int (*)(const char *, int),
               glob_t *restrict);
0105
0106 Rationale: When the restrict type qualifier was added to the glob()
0107 Prototype declaration in an early draft, it was applied to a function
0108 Pointer argument; per ISO/IEC 9899:1999 such a pointer type shall not be
0109 restrict-qualified. (The definition in System Interfaces, Page 573,
0110 Line 18778-18779 is correct.)
```

```
0111 Change Number: XBD/TC1/D6/9 [XBD ERN 21]
0112 On Page: 244 Line: 8586 Section: <langinfo.h> (CRNCYSTR)
0113 Change from:
       "Local currency symbol, preceded by '-' if the symbol
       should appear before the value, '+' if the symbol should
0115
0116
       appear after the value, or '.' if the symbol should replace
       the radix character."
0117
0118 to:
0119
       "Local currency symbol, preceded by '-' if the symbol
0120
       should appear before the value, '+' if the symbol should
       appear after the value, or '.' if the symbol should replace
       the radix character. If the local currency symbol is the
0122
0123 empty string, implementations may return the empty string ("")."
0124 Rationale: The addition of the last sentence has been made to
0125 accommodate historic practice. This is an application-visible change.
0126 Implementations may choose either behavior. Applications should allow
0127 for the empty string to be returned.
0128 Change Number: XBD/TC1/D6/10 [XBD ERN 22]
0129 On Page: 253 Line: 8923 Section: <limits.h>
0130 In Minimum Values, _POSIX_CHILD_MAX, change from:
0131
       "Value: 6"
0132 to:
0133
       "Value: 25"
0134 Rationale: This corrects an editorial error in misapplying the
0135 FIPS 151-2 alignment for this value.
0136 Change Number: XBD/TC1/D6/11 [XBD ERN 23,24]
0137 On Page: 277 Line: 9873,9906 Section: <netdb.h>
0138 Insert the following text between Lines 9873 and 9874:
0139
       NI NUMERICSCOPE For IPv6 addresses, the numeric form of the scope
0140
                         identifier is returned instead of its name.
0141 On Line 9906, change from:
0142
       int getnameinfo(const struct sockaddr *restrict, socklen t,
0143
                      char *restrict, socklen t, char *restrict,
0144
                      socklen t, unsigned);
0145 to:
       int getnameinfo(const struct sockaddr *restrict, socklen_t,
0146
0147
                      char *restrict, socklen_t, char *restrict,
0148
                      socklen t, int);
0149 Rationale: IETF IPv6 API specification alignment.
```

```
0150 Change Number: XBD/TC1/D6/12 [XBD ERN 25,26]
0151 On Page: 279 Line: 9979 Section: <netinet/in.h>
0152 On Page 279, Line 9979, insert "const" in front of
0153 "struct in6_addr in6addr_any".
0154 On Page 280, Line 9985, insert "const" in front of
0155 "struct in6 addr in6addr loopback"
0156 Rationale: IETF IPv6 API specification alignment.
0157 Change Number: XBD/TC1/D6/13 [XBD ERN 27,28,30,31]
0158 On Page: 287 Line: 10196-10198 Section: <pthread.h>
0159 Shade Line 10196 and mark with the TPI margin code.
0160 Shade Line 10197 and mark with the TPP TPI margin codes.
0161 Shade Line 10198 and mark with the TPP margin code.
0162 On Page 288, shade Lines 10238 and 10250 and mark with the TSS
0163 margin code.
0164 On Page 289-290, shade Lines 10310-10311, 10317, 10333-10334, and 10336
0165 and mark with the TSH margin code.
0166 On page 290, shade Lines 10324-10327 and mark with the TMO margin code.
0167 Rationale: Shading errors in contradiction with the function definitions
0168 in the System Interfaces volume.
0169 Change Number: XBD/TC1/D6/14 [XBDft3 ERN 2]
0170 On Page: 303 Line: 10810-10816 Section: <signal.h>
0171 In the DESCRIPTION on Line 10810, change from:
0172
      "What to do on receipt of signal"
0173 to:
0174
        "Pointer to a signal-catching function or one of the macros
       SIG_IGN or SIG_DFL".
0175
0176 On Lines 10815-10816, change from:
0177
       "Pointer to signal handler function or one of the macros SIG_IGN
0178
       or SIG DFL"
0179 to:
0180
       "Pointer to a signal-catching function".
0181 Change Number: XBD/TC1/D6/15 [XBDft3 ERN 3]
0182 On Page: 303 Line: 10814 Section: <signal.h>
0183 Change from:
0184
     void (*)(int, siginfo_t *, void *) sa_sigaction
0185 to:
     void (*sa sigaction)(int, siginfo t *, void *)
0186
0187 Rationale: The declaration given for the sa sigaction member of
0188 struct sigaction is not syntactically valid.
```

```
0189 Change Number: XBD/TC1/D6/16 [XBD ERN 36]
0190 On Page: 340 Line: 12114 Section: <sys/mman.h>
0191 Change the margin code for Line 12114 to MLR.
0192 Add ML as the margin code for Line 12115.
0193 Change the margin code for Line 12119 to MLR.
0194 Add ML as the margin code for Line 12120.
0195 Rationale: Margin code and shading errors. The functions mlock()
0196 and munlock() should be marked as part of the _POSIX_MEMLOCK_RANGE
0197 option.
0198 Change Number: XBD/TC1/D6/17 [XBD ERN 34]
0199 On Page: 359 Line: 12743 Section: <sys/stat.h>
0200 Add the following text to the RATIONALE:
       "The unit for the st blocks member of the stat structure is not
0202
       defined within the standard. In some implementations it is 512 bytes.
       It may differ on a filesystem basis. There is no correlation between
0203
0204
       values of the st_blocks and st_blksize, and the f_bsize (from
0205
       <sys/statvfs.h>) structure members.
0206
       Traditionally some implementations defined the multiplier for st blocks
0207
       in <sys/param.h> as the symbol DEV_BSIZE."
0208 Change Number: XBD/TC1/D6/18 [XBDft2 ERN 2]
0209 On Page: 360 Line: 12795 Section: <sys/statvfs.h>
0210 Change from:
0211
       "ST_NOSUID Does not support setuid()/setgid() semantics."
0212 to:
        "ST NOSUID
0213
                   Does not support the semantics of the ST_ISUID and
0214
                    ST ISGID file mode bits."
0215 Change Number: XBD/TC1/D6/19 [XBD ERN 42]
0216 On Page: 382 Line: 13468 Section: <termios.h>
0217 Change from:
0218
       "ECHOK"
0219 to:
0220
     "ECHOKE"
0221 Rationale: The APPLICATION USAGE is inconsistent with the symbols
0222 reserved in System Interfaces, Section 2.2.2, Page 18.
```

```
0223 Change Number: XBD/TC1/D6/20 [XBD ERN 37]
0224 On Page: 399,407-408 Line: 14061,14443,14460 Section: <unistd.h>
0225 Add after Line 14061 (before _POSIX_JOB_CONTROL):
0226 " POSIX IPV6
            The implementation supports the IPv6 option. If this symbol has a
0227
0228
            value other than -1 or 0, it shall have the value 200112L."
0229 Add to the list of symbolic constants for sysconf() after Line 14443
0230 (before SC JOB CONTROL):
0231
       " SC IPV6"
0232 Add to the list of symbolic constants for sysconf() after Line 14460
0233 (before _SC_RE_DUP_MAX):
0234
        " SC RAW SOCKETS"
0235 Rationale: The POSIX IPV6 symbol appears in Section 2.1.3, Conformance,
0236 but is not included in <unistd.h>; similarly _POSIX_RAW_SOCKETS is
0237 included in <unistd.h> and should have a corresponding SC entry.
0238 Change Number: XBD/TC1/D6/21 [XBDft3 ERN 4]
0239 On Page: 405 Line: 14325,14329,14333 Section: <unistd.h>
0240 In the DESCRIPTION, Constants for Functions, on Lines 14325, 14329,
0241 and 14333, change from:
      "... a programming model with 64-bit int, long, pointer, and
     off t types."
0243
0244 to:
0245
      "... a programming model with 32-bit int and 64-bit long, pointer,
0246
      and off_t types."
0247 Change Number: XBD/TC1/D6/22 [XSH ERN 12]
0248 On Page: 406-409 Line: 14384-14520 Section: <unistd.h>
0249 Remove all margin codes and shading for the PC* and SC* constants
0250 in this header.
0251 Rationale: These constants are required to be mandatory.
0252 Change Number: XBD/TC1/D6/23 [XBDft4 ERN 1]
0253 On Page: 407,408 Line: 14400,14477 Section: <unistd.h>
0254 Insert before _PC_SYNC_IO on Line 14400:
0255
       PC SYMLINK MAX
0256 Insert before _SC_SYNCHRONIZED_IO on Line 14477:
       _SC_SYMLOOP_MAX
0257
0258 Rationale: These constants were omitted.
```

```
0259 Change Number: XBD/TC1/D6/24 [XBD ERN 41]
0260 On Page: 410 Line: 14558 Section: <unistd.h> (fsync())
0261 Shade Line 14558 and mark with the FSC margin code.
0262 Rationale: Consistency with the System Interfaces volume.
0263 Change Number: XBD/TC1/D6/25 [XBD ERN 40]
0264 On Page: 412 Line: 14653 Section: <unistd.h>
0265 Add to the end of the APPLICATION USAGE section:
0266
        "New applications should not use _XOPEN_SHM or _XOPEN_ENH_I18N."
0267 Change Number: XBD/TC1/D6/26 [XBDft4 ERN 2]
0268 Page: 421 Line: 14989 Section: <wchar.h>
0269 Replace "None" in the APPLICATION USAGE section with:
0270
        "The iswblank() function was a late addition to the ISO C standard and
0271
       introduced at the same time as the ISO C standard introduced
0272
       <wctype.h>, which contains all of the isw* functions. The Open Group
       specification had previously aligned with the MSE draft and had
0273
0274
       introduced the rest of the isw* functions into <wchar.h>. For
       backwards-compatibility, the original set of isw* functions, without
0275
0276
       iswblank(), are permitted (as an XSI extension) in <wchar.h>. For
0277
       maximum portability, applications should include <wctype.h> in order
0278
       to obtain declarations for the isw* functions."
```

#### 3. Changes to System Interfaces

This section contains the set of changes to the original text of the System Interfaces.

```
0279 Change Number: XSH/TC1/D6/1 [XBDtc1d2 ERN 1]
0280 On Page: 10 Line: 398 Section: 1.8.1
0281 In Codes, change from:
       "Thread Stack Address Size"
0282
0283 to:
      "Thread Stack Size Attribute"
0284
0285 Change Number: XSH/TC1/D6/2 [XSH ERN 1]
0286 On Page: 17 Line: 642 Section: 2.2.2 (The Name Space)
0287 Delete "POSIX_, _POSIX_, posix_" from the Prefix column
0288 of the table on Page 17, Line 642.
0289 Rationale: This text contradicts Lines 570-574 which states that
0290 "The prefixes posix_, POSIX_, and _POSIX are reserved for use by
0291 IEEE Std 1003.1-2001 and other POSIX standards. Implementations
0292 may add symbols to the headers shown in the following table, provided
0293 the identifiers ... do not use the reserved prefixes posix_, POSIX_,
0294 or POSIX."
0295 Change Number: XSH/TC1/D6/3 [XSH ERN 2]
0296 On Page: 18 Line: 659 Section: 2.2.2 (The Name Space)
0297 Change from:
0298
       "PRI[a-z], SCN[a-z]"
0299 to:
       "PRI [Xa-z], SCN [Xa-z]"
0300
0301 Rationale: The C Standard allows implementations to define macros
0302 of the form "PRI" or "SCN" followed by any lowercase letter or
0303 "X" in <inttypes.h>. (ISO/IEC 9899:1999 P400, Subclause 7.26.4.)
0304 Change Number: XSH/TC1/D6/4 [XSH ERN 3]
0305 On Page: 18 Line: 670 Section: 2.2.2 (The Name Space)
0306 Delete Lines 670-671.
0307 Add a new section after the table before Line 688
       "The following are used to reserve complete names for the
       <stdint.h> header:
0309
       INT[0-9A-Za-z ]* MIN, INT[0-9A-Za-z ]* MAX, INT[0-9A-Za-z ]* C
0310
       UINT[0-9A-Za-z] * MIN, UINT[0-9A-Za-z] * MAX, UINT[0-9A-Za-z] * C"
0312 Rationale: Alignment with the ISO C Standard.
```

```
0313 Change Number: XSH/TC1/D6/5 [XSHft3 ERN 1]
0314 On Page: 31 Line: 1250 Section: Signal_Actions
0315 Change from:
        "Setting a signal action to SIG DFL for a signal that is pending, and
       whose default action is to ignore the signal (for example, SIGCHLD),
0317
0318
       shall cause the pending signal to be discarded, whether or not it
0319
       is blocked.
       The default action for SIGCONT is to resume execution at the point
0320
       where the process was stopped, after first handling any pending
0321
       unblocked signals. [RTS] If the Realtime Signals Extension option
0323
       is supported, any queued values pending shall be discarded and the
0324
       resources used to queue them shall be released and returned to the
0325
       system for other use.[/RTS]"
0326 to:
        "Setting a signal action to SIG DFL for a signal that is pending, and
0328
       whose default action is to ignore the signal (for example, SIGCHLD),
       shall cause the pending signal to be discarded, whether or not it
0329
       is blocked. [RTS] If the Realtime Signals Extension option is
0330
0331
       supported, any queued values pending shall be discarded and the
       resources used to queue them shall be released and returned to the
0332
0333
       system for other use. [/RTS]
0334
       The default action for SIGCONT is to resume execution at the point
0335
       where the process was stopped, after first handling any pending
0336
       unblocked signals."
0337 Rationale: There is an editorial mistake in Section 2.4.3, Lines
0338 1253-7. The RTS marked text on Lines 1254-1257 ought to belong to
0339 the paragraph above (Lines 1250-1252) and be disjoint from the first
0340 sentence commencing at Line 1253.
0341 Change Number: XSH/TC1/D6/6 [XSHft4 ERN 1]
0342 On Page: 33 Line: 1336 Section: 2.4.3
0343 Add the abort() function to the list of async-cancel-safe functions.
0344 Change Number: XSH/TC1/D6/7 [XSH ERN 5]
0345 On Page: 43 Line: 1759-1770 Section: 2.8.3.1 (Memory Locking)
0346 Remove the first paragraph explaining the missing shading.
0347 Shade the second paragraph and add the margin code MLR.
0348 Shade the third paragraph and add the margin code ML | MLR.
0349 Rationale: Corrections to option shading.
0350 Change Number: XSH/TC1/D6/8 [XSHft2 ERN 1]
0351 On Page: 55 Line: 2270 Section: 2.9.5.2
0352 In the list of functions with Cancelation points on Lines 2261-2274,
0353 add "pselect()" after "pread()".
0354 Rationale: This was missed in the integration of this new function.
```

```
0355 Change Number: XSH/TC1/D6/9 [XSH ERN 8]
0356 On Page: 85 Line: 3372-3374 Section: _Exit() (pointer page)
0357 Replace the SYNOPSIS with:
0358
        #include <stdlib.h>
       void Exit(int status);
0359
0360
        #include <unistd.h>
0361
       void exit(int status);
0362 Rationale: Consistency with the interface page.
0363 Change Number: XSH/TC1/D6/10 [XSHft4 ERN 1]
0364 On Page: 92 Line: 3543,3562,3569 Section: abort
0365 In the DESCRIPTION, change from:
0366
        "[CX] The abnormal termination processing shall include at least
0367
        the effect of fclose() on all open streams and the default actions
0368
       defined for SIGABRT.
0369
        [XSI]On XSI-conformant systems, in addition the abnormal
       termination processing shall include the effect of fclose() on
0370
0371
       message catalog descriptors."
0372 to:
       "[CX] The abnormal termination processing shall include the default
0373
        actions defined for SIGABRT and may include an attempt to effect
0375
        fclose() on all open streams."
0376 Add to the RATIONALE section for abort:
        "C99 requires the abort() function to be async-signal-safe.
0378
        Since this standard defers to ISO C, this required a change to
0379
        the DESCRIPTION from 'shall include the effect of
        fclose()' to "may include an attempt to effect fclose()".
0380
0381
       The revised wording permits some backwards-compatibility and avoids
0382
       a potential deadlock situation.
0383
       The Open Group Resolution bwg2002-003 is applied, removing the
0384
        following XSI shaded paragraph from the DESCRIPTION:
0385
        "On XSI-conformant systems, in addition the abnormal termination
0386
        processing shall include the effect of fclose() on message
0387
       catalog descriptors."
0388
       There were several reasons to remove this paragraph:
0389
       - No special processing of open message catalogs needs to be performed
        prior to abnormal process termination.
0390
0391
       - The main reason to specifically mention that abort() includes the
         effect of fclose() on open streams is to flush output queued on the
0392
0393
          stream. Message catalogs in this context are read-only and, therefore,
0394
         do not need to be flushed.
0395
       - The effect of fclose() on a message catalog descriptor is
0396
         unspecified. Message catalog descriptors are allowed, but not required
0397
          to be implemented using a file descriptor, but there is no mention
0398
         in the standard of a message catalog descriptor using a standard I/O
```

```
0399
          stream FILE object as would be expected by fclose()."
0400 Add to the CHANGE HISTORY:
0401
        "Changes are made to the DESCRIPTION for C99 alignment.
0402
       The Open Group Resolution bwg2002-003 is applied."
0403 Change Number: XSH/TC1/D6/11 [XSH ERN 9]
0404 On Page: 149 Line: 5244 Section: bsearch
0405 In the DESCRIPTION, add at the end of Line 5244:
0406
        "If the nel argument has the value zero, the comparison function
       pointed to by compar shall not be called and no match shall be found."
0407
0408 Add at Line 5247 the new paragraphs:
        "The application shall ensure that the comparison function pointed to
0410
       by compar does not alter the contents of the array. The implementation
0411
        may reorder elements of the array between calls to the comparison
       function, but shall not alter the contents of any individual element.
0412
0413
       The implementation shall ensure that the first argument is always a
0414
       pointer to the key.
0415
        When the same objects (consisting of width bytes, irrespective of
        their current positions in the array) are passed more than once to the
0416
0417
        comparison function, the results shall be consistent with one another.
0418
       That is, the same object shall always compare the same way with the
0419
       kev."
0420 Replace Line 5313 (on Page 150) with:
        "The requirement that the second argument (hereafter referred to as p)
0422
        to the comparison function is a pointer to an element of the array
0423
        implies that for every call all of the following expressions are nonzero:
0424
          ((char *)p - (char *)base) % width == 0
0425
          (char *)p >= (char *)base
          (char *)p < (char *)base + nel * width"
0426
0427 Change Number: XSH/TC1/D6/12 [XSH ERN 10]
0428 On Page: 203 Line: 6879 Section: close
0429 In the DESCRIPTION, change from:
0430
        "If fildes refers to the master side of a pseudo-terminal, and this is
       the last close, a SIGHUP signal shall be sent to the process group, if
0431
0432
       any, for which the slave side of the pseudo-terminal is the
0433
       controlling terminal."
0434 to:
0435
       "If fildes refers to the master side of a pseudo-terminal, and this
0436
       is the last close, a SIGHUP signal shall be sent to the controlling
0437
       process, if any, for which the slave side of the pseudo-terminal is
0438
       the controlling terminal."
0439 Rationale: The behavior of pseudo-terminals and regular terminals
0440 should be as much alike as possible in this case; the change achieves
0441 that and matches historical behavior.
```

```
0442 Change Number: XSH/TC1/D6/13 [XSH ERN 11]
0443 On Page: 210 Line: 7118-7119,7122 Section: closelog
0444 In the EXAMPLES section, Lines 7118-7119, change from:
       "The following example causes subsequent calls to syslog() to accept
       error messages or messages generated by arbitrary processes, and to
0447
       reject all other messages."
0448 to:
        "The following example causes subsequent calls to syslog() to accept
       error messages, and to reject all other messages."
0450
0451 On Line 7122, change from:
       int mask = LOG_MASK (LOG_ERR | LOG_USER);
0452
0453 to:
       int mask = LOG MASK (LOG ERR);
0455 Change Number: XSH/TC1/D6/14 [XSH ERN 13]
0456 On Page: 259 Line: 8566,8590 Section: dlsym
0457 In the EXAMPLES section, change from:
0458
      fptr = (int (*)(int))dlsym(handle, "my_function");
0459 to:
0460
       *(void **)(&fptr) = dlsym(handle, "my function");
0461 In the RATIONALE section on Page 260, Line 8590, change from:
0462
       "None."
0463 to:
       "The C Standard does not require that pointers to functions can be
0464
       cast back and forth to pointers to data. Indeed, the C Standard does
       not require that an object of type void* can hold a pointer to a
0466
       function. Systems supporting the X/Open System Interfaces Extension,
0467
0468
       however, do require that an object of type void* can hold a pointer to
0469
       a function. The result of converting a pointer to a function into a
0470
       pointer to another data type (except void*) is still undefined, however.
0471
       Note that compilers conforming to the C Standard are required to
0472
       generate a warning if a conversion from a void* pointer to a function
0473
       pointer is attempted as in:
0474
         fptr = (int (*)(int))dlsym(handle, "my_function");
0475
       Due to the problem noted here, a future revision may either add a new
0476
       function to return function pointers, or the current interface may be
0477
       deprecated in favor of two new functions, one that returns data
0478
       pointers, and the other that returns function pointers."
0479 Change Number: XSH/TC1/D6/15 [XSH ERN 14]
0480 On Page: 295 Line: 9573 Section: exec
0481 In the DESCRIPTION, add as a new paragraph before Line 9573
0482 (before "Directory streams open..."):
        "If file descriptors 0, 1, and 2 would otherwise be closed after a
0483
```

```
successful call to one of the exec family of functions, and the new
0485
       process image file has the set-user-ID or set-group-ID file mode
        bits set, [XSI] and the ST_NOSUID bit is not set for the file system
0486
       containing the new process image file, [/XSI] implementations may
0487
0488
       open an unspecified file for each of these file descriptors in the
       new process image."
0490 Add to the end of the APPLICATION USAGE section (Page 300) as a new
0491 paragraph:
        "Applications should not depend on file descriptors 0, 1, and 2 being
0493
        closed when they are exec'd. A future revision may allow these file
        descriptors to be automatically opened for any process."
0495 Rationale: This addresses a security concern, where implementations
0496 may want to reopen file descriptors 0, 1, and 2 for setuid and setgid
0497 programs calling the exec family of functions.
0498 Change Number: XSH/TC1/D6/16 [XSHft2 ERN 2]
0499 On Page: 305 Line: 9975 Section: exit
0500 Change from:
0501
        "and the low-order eight bits (that is, bits 0377) of status
0502
       are made available to it."
0503 to:
        "and the low-order eight bits (that is, bits 0377) of status
0504
0505
        shall be made available to it."
0506 Change Number: XSH/TC1/D6/17 [XSHft4 ERN 2]
0507 On Page: 393 Line: 12700 Section: fork
0508 In the DESCRIPTION, add a new sentence after the THR shaded sentence
0509 that ends on Line 12700:
0510
        "When the application calls fork from a signal handler and any of the \,
0511
        fork handlers registered by pthread atfork() calls a function that is
       not async-signal-safe, the behavior is undefined."
0512
0513 Add a new paragraph in the RATIONALE section after Line 12807:
        "While the fork() function is async-signal-safe, there is no way for
0515
        an implementation to determine whether the fork handlers established
0516
       by pthread atfork() are async-signal-safe. The fork handlers may
0517
        attempt to execute portions of the implementation that are not
        async-signal-safe, such as those that are protected by mutexes,
0518
0519
       leading to a deadlock condition. It is therefore undefined for the
0520
        fork handlers to execute functions that are not async-signal-safe
0521
       when fork() is called from a signal handler."
0522 Change Number: XSH/TC1/D6/18 [XSH ERN 12]
0523 On Page: 397 Line: 12845-12851,12861-12865 Section: fpathconf
0524 In the DESCRIPTION, change the fourth paragraph from:
        "The name argument represents the variable to be queried relative to
        that file or directory. Implementations shall support all of the
0527
       variables listed in the following table and may support others. The
0528
        variables in the following table come from limits.h> or <unistd.h>
       and the symbolic constants, defined in <unistd.h>, are the
```

```
0530
        corresponding values used for name. Support for some pathname
0531
        configuration variables is dependent on implementation options (see
0532
        shading and margin codes in the table below). Where an implementation
       option is not supported, the variable need not be supported."
0533
0534 to:
0535
        "The name argument represents the variable to be queried relative to
        that file or directory. Implementations shall support all of the
0536
        variables listed in the following table and may support others. The
0537
       variables in the following table come from <limits.h> or <unistd.h>
0538
0539
       and the symbolic constants, defined in <unistd.h>, are the
       corresponding values used for name."
0541 On Lines 12861-12865, remove the margin markers and the shading in the
0542 table.
0543 Rationale: A corresponding change in Base Definitions now mandates these
0544 symbols.
0545 Change Number: XSH/TC1/D6/19 [XSHft4 ERN 3]
0546 On Page: 424,425 Line: 13888,13930 Section: freeaddrinfo
0547 After the second paragraph in the DESCRIPTION (after Line 13888),
0548 add in smaller type:
0549
        "Note: In many cases it is implemented by the Domain Name System,
        as documented in RFC 1034, RFC 1035, and RFC 1886."
0550
0551 After the paragraph starting "If the AI CANONNAME flag" on Page 425,
0552 Line 13930, add in smaller type:
        "Note: Since different implementations use different conceptual models,
       the terms "canonical name" and "alias" cannot be precisely defined
0554
0555
       for the general case. However, Domain Name System implementations
0556
       are expected to interpret them as they are used in RFC 1034.
0557
       Note: A numeric host address string is not a "name", and thus does
0558
       not have a "canonical name" form; no address to hostname translation
0559
       is performed. See below for handling of the case where a canonical
       name cannot be obtained."
0560
0561 Add to the end of the APPLICATION USAGE section:
        "The term "canonical name" is misleading; it is taken from the
0562
0563
       Domain Name System (RFC 2181). It should be noted that the canonical
0564
       name is a result of alias processing, and not necessarily a unique
0565
       attribute of a host, address, or set of addresses. See RFC 2181 for
       more discussion of this in the Domain Name System context.
0567 Add RFC 2181 to the Informative References front-matter section.
0568 Change Number: XSH/TC1/D6/20 [XSH ERN 17,18,19]
0569 On Page: 425 Line: 13921,13929,13943 Section: freeaddrinfo
0570 In the DESCRIPTION, on Line 13921, change from:
0571
        "and AI NUMERICSERV".
0572 to:
0573
        "AI NUMERICSERV, AI V4MAPPED, AI ALL, and AI ADDRCONFIG".
0574 Append the following sentence at the end of Line 13929:
```

```
0575
        "The AI PASSIVE flag shall be ignored if the nodename argument is
0576
       not null."
0577 Insert the following text after Line 13943:
        "If the AI_ADDRCONFIG flag is specified, IPv4 addresses shall be
        returned only if an IPv4 address is configured on the local system,
0579
       [IP6] and IPv6 addresses shall be returned only if an IPv6 address is
0581
       configured on the local system.[/IP6]"
0582 Rationale: This is for alignment with the IETF IPv6 API specification.
0583 [Editorial Note: Items marked within square brackets are to be shaded
0584 and the margin mark noted added.]
0585 Change Number: XSH/TC1/D6/21 [XSH ERN 20]
0586 On Page: 443 Line: 14579 Section: fsetpos()
0587 In the ERRORS section, delete the [EINVAL] error (Lines 14579-14580).
0588 Rationale: This is erroneous text referring to an unknown argument whence.
0589 Change Number: XSH/TC1/D6/22 [XSH ERN 21]
0590 On Page: 481 Line: 15875-15883 Section: gai_strerror
0591 In the DESCRIPTION, add a new line "[EAI_OVERFLOW]" between Lines
0592 15880 and 15881.
0593 Rationale: [EAI OVERFLOW] is missing from the list of known error codes.
0594 Change Number: XSH/TC1/D6/23 [XSH ERN 22,23,24]
0595 On Page: 526 Line: 17267,17281-17282,17292-17293 Section: getnameinfo
0596 In the SYNOPSIS, change from:
       int getnameinfo(const struct sockaddr *restrict sa, socklen t salen,
                       char *restrict node, socklen_t nodelen,
0598
0599
                        char *restrict service,
                       socklen t servicelen, unsigned flags);
0600
0601 to:
0602
       int getnameinfo(const struct sockaddr *restrict sa, socklen t salen,
                        char *restrict node, socklen_t nodelen,
0603
                        char *restrict service,
0604
0605
                        socklen_t servicelen, int flags);
0606 In the DESCRIPTION, Lines 17281-17282, change from:
        "If the node's name cannot be located, the numeric form of the node's
       address is returned instead of its name."
0608
0609 to:
0610
        "If the node's name cannot be located, the numeric form of the address
0611
        contained in the socket address structure pointed to by the sa
       argument is returned instead of its name.'
0613 On Lines 17292-17293, change from:
0614
        "If the flag bit NI NUMERICHOST is set, the numeric form of the host's
        address shall be returned instead of its name, under all circumstances."
```

```
0616 to:
0617
       "If the flag bit NI NUMERICHOST is set, the numeric form of the address
0618
       contained in the socket address structure pointed to by the sa
       argument shall be returned instead of its name, under all circumstances."
0620 Insert the following text between Lines 17297 and 17298, as a
0621 new bullet list item:
        "If the flag bit NI NUMERICSCOPE is set, the numeric form of the scope
0623
       identifier shall be returned (for example, interface index) instead
       of its name. This flag shall be ignored if the sa argument is not an
      IPv6 address."
0625
0626 Rationale: IETF IPv6 API specification alignment.
0627 Change Number: XSH/TC1/D6/24 [XSH ERN 25]
0628 On Page: 527 Line: 17312-17324 Section: getnameinfo
0629 In the ERRORS section, add the following between Lines 17323 and 17324:
0630
       "[EAI OVERFLOW] An argument buffer overflowed. The buffer pointed to
0631
                        by the node argument or the service argument was
0632
                        too small."
0633 Change Number: XSH/TC1/D6/25 [XSH ERN 26]
0634 On Page: 551 Line: 18090 Section: getrlimit
0635 In the DESCRIPTION, change from:
0636
       "If this limit is exceeded, functions that allocate new file
       descriptors may fail with errno set to [EMFILE]."
0637
0638 to:
        "If this limit is exceeded, functions that allocate a file descriptor
       shall fail with errno set to [EMFILE]."
0641 Add to the end of the APPLICATION USAGE section:
0642
        "If a process attempts to set the hard limit or soft limit for
0643
       RLIMIT NOFILE to less than the highest currently open file
0644
       descriptor+1, unexpected behavior may occur."
0645 Change Number: XSH/TC1/D6/26 [XSH ERN 59]
0646 On Page: 563 Line: 18449 Section: getsubopt
0647 In the SYNOPSIS, change "tokens" to "keylistp" on Line 18449.
0648 Change Number: XSH/TC1/D6/27 [XSH ERN 27,28]
0649 On Page: 577 Line: 18969 Section: gmtime
0650 In the RETURN VALUE section, change from:
0651
        "The gmtime() function shall return a pointer to a struct tm."
```

```
0652 to:
        "Upon successful completion, the gmtime() function shall return a
       pointer to a struct tm. If an error is detected, gmtime() shall return
0654
0655
       a null pointer [CX] and set errno to indicate the error[/CX]."
0656 Add to the ERRORS section(Shaded and marked with the CX margin code):
0657
        "The gmtime() function shall fail if:
        [EOVERFLOW] The result cannot be represented."
0658
0659 On Page 577, Line 18971, in the RETURN VALUE section, remove the text:
0660
        "or UTC is not available,"
0661 Change Number: XSH/TC1/D6/28 [XSH ERN 29]
0662 On Page: 593 Line: 19466 Section: if_indextoname
0663 In the DESCRIPTION, change from:
      "a buffer of at least {IFNAMSIZ} bytes."
0664
0665 to:
        "a buffer of at least {IF NAMESIZE} bytes."
0666

0764 On Page: 966 Line: 30749 Section: pow()
0765 In the RETURN VALUE section, change from:
0766
       "If the correct value would cause overflow, a range error shall occur
       and pow(), powf(), and powl() shall return HUGE VAL, HUGE VALF,
       and HUGE VALL, respectively."
0768
0769 to:
0770
        "If the correct value would cause overflow, a range error shall occur
       and pow(), powf(), and powl() shall return +/-HUGE_VAL, +/-HUGE_VALF,
0771
       and +/-HUGE VALL, respectively with the same sign as the correct value
       of the function."
0773
0774 Change Number: XSH/TC1/D6/43 [XSH ERN 43]
0775 On Page: 997 Line: 31631 Section: pthread attr getstacksize()
0776 In the SYNOPSIS, change the TSA margin code to the TSS margin code.
0777 In the CHANGE HISTORY section, on Line 31666, change from:
        "Thread Stack Address Attribute option"
0779 to:
0780
      "Thread Stack Size Attribute option"
0781 Change Number: XSH/TC1/D6/44 [XSH ERN 54]
0782 On Page: 1046 Line: 32852 Section: pthread_create()
0783 Add after Line 32852, with the text shaded and marked with the
0784 XSI margin code:
0785
        "The alternate stack shall not be inherited."
0786 Change Number: XSH/TC1/D6/45 [XSH ERN 45]
0787 On Page: 1108 Line: 34732 Section: pthread rwlock destroy()
0788 Add to the APPLICATION USAGE section:
        "Applications using these and related read-write lock functions may be
0790
        subject to priority inversion, as discussed in the Base Definitions
       volume of IEEE Std 1003.1-2001, Section 3.285, Priority Inversion."
0791
```

```
0792 Change Number: XSH/TC1/D6/46 [XSH ERN 46]
0793 On Page: 1125 Line: 35199 Section: pthread_rwlockattr_init()
0794
     (pointer page)
0795 In the SYNOPSIS, change the XSI margin code to the THR margin code.
0796 Change Number: XSH/TC1/D6/47 [XSH ERN 47]
0797 On Page: 1126 Line: 35208 Section: pthread rwlockattr setpshared()
0798 (pointer page)
0799 In the SYNOPSIS, change the XSI margin code to the THR margin code.
0800 Change Number: XSH/TC1/D6/48 [XSHft2 ERN 3,4, XBD ERN 15]
0801 On Page: 1148 Line: 35727,35731,35751 Section: putenv()
0802 Change Line 35727 from:
0803
        "The string argument should point to a string of the form "name=value."
0804 to:
0805
       "The string argument should point to a string of the form "name=value"."
0806 Rationale: A closing double quote was missing.
0807 Change Line 35730 from:
8080
       "The space used by string is no longer used once a new string-defining
0809
       name is passed to putenv()."
0810 to:
0811
        "The space used by string is no longer used once a new string
       which defines name is passed to putenv()."
0813 In the APPLICATION USAGE section, add a new paragraph after Line 35751:
0814
        "See exec for restrictions on changing the environment
0815
       in multi-threaded applications."
0816 Change Number: XSH/TC1/D6/49 [XSH ERN 48]
0817 On Page: 1160 Line: 36046 Section: qsort()
0818 In the DESCRIPTION, add at the end of Line 36047:
0819
       "If the nel argument has the value zero, the comparison function
0820
       pointed to by compar shall not be called and no rearrangement shall
0821
       take place."
0822 Add at Line 36048 the new paragraphs:
        "The application shall ensure that the comparison function pointed to
       by compar does not alter the contents of the array. The implementation
0824
0825
       may reorder elements of the array between calls to the comparison
0826
       function, but shall not alter the contents of any individual element.
0827
       When the same objects (consisting of width bytes, irrespective of
0828
       their current positions in the array) are passed more than once to the
        comparison function, the results shall be consistent with one another.
0829
       That is, they shall define a total ordering on the array."
0830
0831 Replace Line 36064 with:
```

```
0832
        "The requirement that each argument (hereafter referred to as p) to
0833
        the comparison function is a pointer to elements of the array implies
0834
        that for every call, for each argument separately, all of the
0835
        following expressions are nonzero:
          ((char *)p - (char *)base) % width == 0
(char *)p >= (char *)base
0836
0837
          (char *)p < (char *)base + nel * width"</pre>
0838
0839 Change Number: XSH/TC1/D6/50 [XSHft2 ERN 5]
0840 On Page: 1175 Line: 36568 Section: readdir()
0841 Replace the EXAMPLES section with:
0842
        "The following sample program searches the current directory for
0843
        each of the arguments supplied on the command line:
0844
          #include <dirent.h>
0845
          #include <errno.h>
0846
         #include <stdio.h>
0847
         #include <string.h>
0848
          static void lookup(const char *arg)
0850
              DIR *dirp;
0851
              struct dirent *dp;
0852
              if ((dirp = opendir(".")) == NULL) {
0853
                  perror("couldn't open '.'");
0854
                  return;
              }
0855
0856
              do {
0857
                  errno = 0;
0858
                  if ((dp = readdir(dirp)) != NULL) {
0859
                      if (strcmp(dp->d_name, arg) != 0)
0860
                          continue;
                       (void) printf("found %s\n", arg);
0861
0862
                       (void) closedir(dirp);
0863
                          return;
0864
0865
              } while (dp != NULL);
0866
              if (errno != 0)
0867
                  perror("error reading directory");
0868
              else
                  (void) printf("failed to find %s\n", arg);
0869
0870
              (void) closedir(dirp);
0871
              return;
0872
          }
          int main(int argc, char *argv[])
0873
0874
0875
              int i:
0876
              for (i = 1; i < argc; i++)
0877
                  lookup(arqv[i]);
0878
              return (0);
0879
          }
0880
```

```
0881 Change Number: XSH/TC1/D6/51 [XSH ERN 49]
0882 On Page: 1185 Line: 36852 Section: realpath()
0883 In the DESCRIPTION, add as a new paragraph:
       "If resolved name is a null pointer, the behavior of realpath() is
0885
       implementation-defined."
0886 In the ERRORS section, Line 36860, change from:
       "[EINVAL] Either the file name or resolved name is a null pointer."
0888 to:
0889
       "[EINVAL] The file name argument is a null pointer".
0890 Add to the RATIONALE, Line 36890:
       "Since the maximum pathname length is arbitrary unless {PATH_MAX} is
0891
      defined, an application generally cannot supply a resolved name buffer
     with size \{\{PATH\_MAX\}+1\}."
0893
0894 Add to the FUTURE DIRECTIONS section, Line 36892:
0895
        "In the future, passing a null pointer to realpath() for the
0896
        resolved_name argument may be defined to have realpath() allocate
       space for the generated pathname."
0897
0898 Change Number: XSH/TC1/D6/52 [XSH ERN 50]
0899 On Page: 1228 Line: 38226 Section: sched get priority max()
0900 In the SYNOPSIS, change the PS margin code to PS TPS.
0901 Change Number: XSH/TC1/D6/53 [XSH ERN 51]
0902 On Page: 1231 Line: 38343 Section: sched_rr_get_interval()
0903 In the SYNOPSIS, change the PS margin code to PS TPS.
0904 Change Number: XSH/TC1/D6/54 [XSHft4 ERN 6]
0905 On Page: 1245 Line: 38757 Section: sem getvalue()
0906 In the DESCRIPTION, change from:
       "If sem is locked, then the value returned by sem_getvalue() is either
0908
       zero or a negative."
0909 to:
       "If sem is locked, then the object to which sval points
0911
       shall either be set to zero or to a negative."
```

```
0912 Change Number: XSH/TC1/D6/55 [XBD ERN 15]
0913 On Page: 1282,1283 Line: 39975,39997 Section: setenv()
0914 In the APPLICATION USAGE section, add the following text on Line 39975:
       "See exec for restrictions on changing the environment
       in multi-threaded applications."
0916
0917 Add to the SEE ALSO section on Page 1283, Line 39997:
       "exec"
0918
0919 Change Number: XSH/TC1/D6/56 [XSH ERN 52]
0920 On Page: 1299 Line: 40351 Section: setpgid()
0921 In the DESCRIPTION, change from:
      "Also, if pqid is 0, the process group ID of the indicated process
      shall be used."
0923
0924 to:
0925
       "Also, if pgid is 0, the process ID of the indicated process shall
0926
       be used."
0927 Rationale: Revert to IEEE Std POSIX.1-1996 wording; it appeared to be
0928 an unintended change.
0929 Change Number: XSH/TC1/D6/57 [XBDft3 ERN 2]
0930 On Page: 1338 Line: 41433 Section: sigaction()
0931 In the DESCRIPTION, in the table on Line 41433, change the first
0932 entry from:
0933
       "SIG_DFL, SIG_IGN, or pointer to a function".
0934 to:
0935
        "Pointer to a signal-catching function or one of the macros
       SIG_IGN or SIG_DFL."
0936
0937 Change the Description field in the last entry in the table from:
0938
        "Signal catching function."
0939 to:
0940
       "Pointer to a signal-catching function."
0941 Change Number: XSH/TC1/D6/58 [XSH ERN 54]
0942 On Page: 1345 Line: 41734 Section: sigaltstack()
0943 Change the first sentence on Line 41734 from:
0944
        "The sigaltstack() function allows a process to define and examine
0945
       the state of an alternate stack for signal handlers."
0946 to:
0947
       "The sigaltstack() function allows a process to define and examine
0948
       the state of an alternate stack for signal handlers for the current
0949
       thread."
```

```
0950 Change Number: XSH/TC1/D6/59 [XSH ERN 55]
0951 On Page: 1353 Line: 42015 Section: siginterrupt()
0952 In the DESCRIPTION, change from:
     siginterrupt(int sig, int flag) {
0954 to:
0955
      int siginterrupt(int sig, int flag) {
0956 Change Number: XSH/TC1/D6/60 [XSH ERN 56]
0957 On Page: 1424 Line: 44059 Section: strftime()
0958 Add the following text, shaded and marked with the CX margin after
0959 Line 44059:
0960
       "If a struct tm broken-down time structure is created by localtime()
       or localtime r(), or modified by mktime(), and the value of TZ is
0961
       subsequently modified, the results of the %Z and %z strftime()
0962
0963
       conversion specifiers are undefined, when strftime() is called with
0964
       such a broken-down time structure.
0965
       If a struct tm broken-down time structure is created or modified
       by gmtime() or gmtime_r(), it is unspecified whether the result of the
0966
        %Z and %z conversion specifiers shall refer to UTC or the current
       local time zone, when strftime() is called with such a broken-down
0968
0969
       time structure."
0970 Change Number: XSH/TC1/D6/61 [XSHft ERN 7]
0971 On Page: 1442 Line: 44661-44663 Section: strtod()
0972 In the RETURN VALUE section, change from:
       "If the correct value is outside the range of representable values,
       HUGE VAL, HUGE VALF, or HUGE VALL shall be returned (according to
0975
       the sign of the value), and errno shall be set to [ERANGE]."
0976 to:
0977
        "If the correct value is outside the range of representable values,
        +/-HUGE_VAL, +/-HUGE_VALF, or +/-HUGE_VALL shall be returned
        (according to the sign of the value), and errno shall be set to
0980
       [ERANGE]."
0981 Rationale: The sign of the return value was previously unclear.
0982 Change Number: XSH/TC1/D6/62 [XSH ERN 12]
0983 On Page: 1466-1469 Line: 45296-45305,45307-45434 Section: sysconf()
0984 In the DESCRIPTION, change the first paragraph from:
       "The sysconf() function provides a method for the application
0985
0986
       to determine the current value of a configurable system limit or
       option (variable). Support for some system variables is dependent
0988
       on implementation options (as indicated by the margin codes in the
0989
       following table). Where an implementation option is not supported,
0990
       the variable need not be supported."
0991 to:
```

```
0992
        "The sysconf() function provides a method for the application to
0993
        determine the current value of a configurable system limit or option
0994
        (variable). The implementation shall support all of the variables listed
0995
       in the following table and may support others."
0996 In the second paragraph, delete the text on Line 45303:
        "Support for some configuration variables is dependent on implementation
       options (see shading and margin codes in the table below). Where an
0998
0999
        implementation option is not supported, the variable need not be
1000
       supported."
1001 Remove the shading and margin markers on Lines 45307-45434 (the table).
1002 Add the following entries to the table in alphabetical order:
       _POSIX2_PBS_CHECKPOINT _SC_2_PBS_CHECKPOINT
1003
                            _SC_IPV6
_SC_RAW_SOCKETS
       _POSIX_IPV6
1004
       _POSIX_RAW_SOCKETS
1005
                               _SC_SYMLOOP MAX
       _POSIX_SYMLOOP MAX
1006
       _XOPEN_STREAMS
                               _SC_XOPEN_STREAMS
1007
1008 Rationale: A corresponding change in Base Definitions means that all
1009 the _PC* and _SC* symbols are now required to be supported. The deletion
1010 in paragraph two removes some duplicated text. The additions add some
1011 symbols drawn from the standard that were omitted from this reference
1012 page.
1013 Change Number: XSH/TC1/D6/63 [XSH ERN 57]
1014 On Page: 1469 Line: 45441 Section: sysconf()
1015 In the RETURN VALUE section, change from:
1016
       "The value shall not change during the lifetime of the calling process."
1017 to:
1018
        "The value shall not change during the lifetime of the calling process,
       [XSI] except that sysconf ( SC OPEN MAX) may return different values
1020
       before and after a call to setrlimit() which changes the RLIMIT_NOFILE
1021
       soft limit[/XSI]".
1022 [Editorial Note: The new text is shaded and marked with the XSI margin
1023 code.]
1024 Change Number: XSH/TC1/D6/64 [XSHft4 ERN 8]
1025 On Page: 1478 Line: 45779-45780 Section: tan()
1026 In the RETURN VALUE section, change from:
       "If the correct value would cause overflow, a range error shall occur
1028
       and tan(), tanf(), and tanl() shall return the value of the macro
       HUGE VAL, HUGE VALF, and HUGE_VALL, respectively.
1029
1030 to:
        "If the correct value would cause overflow, a range error shall occur
       and tan(), tanf(), and tanl() shall return +/-HUGE VAL, +/-HUGE VALF,
1033
       and +/-HUGE_VALL, respectively with the same sign as the correct value
       of the function."
1035 Rationale: The sign of the return value was previously unclear.
```

```
1036 Change Number: XSH/TC1/D6/65 [XSHft4 ERN 9]
1037 On Page: 1509 Line: 46605-46607 Section: tgamma()
1038 In the RETURN VALUE section, change from:
       "If the correct value would cause overflow, a range error shall occur
1040
       and tgamma(), tgammaf(), and tgammal() shall return HUGE_VAL, HUGE_VALF,
1041
       and HUGE VALL, respectively."
1042 to:
     "If the correct value would cause overflow, a range error shall occur
and tgamma(), tgammaf(), and tgammal()shall return +/-HUGE_VAL,
1045 +/-HUGE_VALF, and +/-HUGE_VALL, respectively with the same sign as the
1046
       correct value of the function."
1047 Change Number: XSH/TC1/D6/66 [XSHft4 ERN 10]
1048 On Page: 1612 Line: 49660-49662 Section: wcstod()
1049 In the RETURN VALUE section, change from:
1050
      "If the correct value is outside the range of representable values,
       HUGE_VAL, HUGE_VALF, or HUGE_VALL shall be returned (according to
1052
       the sign of the value), and errno shall be set to [ERANGE]."
1053 to:
        "If the correct value is outside the range of representable values,
       +/-HUGE_VAL, +/-HUGE_VALF, or +/-HUGE_VALL shall be returned
       (according to the sign of the value), and errno shall be set to
1056
      [ERANGE]."
1057
1058 Rationale: The sign of the return value was previously unclear.
```

# 4. Changes to Shell and Utilities

This section contains the set of changes to the original text of the Shell and Utilities.

```
1059 Change Number: XCU/TC1/D6/1 [XBDtc1d2 ERN 1]
1060 On Page: 16 Line: 630 Section: 1.8.1
1061 In Codes, change from:
       "Thread Stack Address Size"
1062
1063 to:
1064
       "Thread Stack Size Attribute"
1065 Change Number: XCU/TC1/D6/2 [XCU ERN 9]
1066 On Page: 17 Line: 693-696 Section: Table 1-3
1067 In Utility Limit Minimum Values, delete Lines 693-696 (the table
1068 entry for POSIX2 VERSION).
1069 Rationale: POSIX2 VERSION is not a Utility Limit Minimum Value.
1070 Change Number: XCU/TC1/D6/3 [XCU ERN 9]
1071 On Page: 18 Line: 700-703 Section: 1.9
1072 In Utility Limits, change from:
       "utility (see getconf (on page 481)) and through the sysconf() function
1074
       defined in the System Interfaces volume of IEEE Std 1003.1-2001. The
1075
       literal names shown in Table 1-3 (on page 17) apply only to the
       getconf utility; the high-level language binding describes the exact
1076
1077
       form of each name to be used by the interfaces in that binding."
1078 to:
1079
       "utility (see getconf (on page 481))."
1080 Change Number: XCU/TC1/D6/4 [XCUft4 ERN 1]
1081 On Page: 40 Line: 1676-1678 Section: 2.6.3
1082 In Command Substitution, change from:
       "If a command substitution occurs inside double-quotes, it shall not be
1083
       performed on the results of the substitution."
1084
1085 to:
1086
       "If a command substitution occurs inside double-quotes, field splitting
       and pathname expansion shall not be performed on the results of the
       substitution."
1088
1089 Rationale: The replacement text taken from POSIX.2-1992 is clearer
1090 about the items that are not performed.
```

```
1091 Change Number: XCU/TC1/D6/5 [XCU ERN 1]
1092 On Page: 65-99 Line: 2678-3740 Section: Special Built-In Utilities
1093 In the OPTIONS sections of the following utilities:

1175 eval on Page 73, Line 2901
1176 exec on Page 75, Line 2960
1177 exit on Page 77, Line 3021
1178 return on Page 83, Line 3217
1179 shift on Page 91, Line 3514
1180 unset on Page 98, Line 3738
1181 Change from:
1182
       "None."
1183 to:
     "Not used."
1184
1185 In the STDOUT sections of the following utilities:
1186 export on Page 79, Line 3090
1187 readonly on Page 81, Line 3164
1188 set on Page 88, Line 3380
1189 times on Page 93, Line 3568
1190 trap on Page 96, Line 3654
```

```
1191 Change from:
1192
        "None."
1193 to:
     "See the DESCRIPTION."
1195 In the STDERR sections of the following utilities:
1196 break on Page 65, Line 2680
1197 colon on Page 67, Line 2739
1198 continue on Page 69, Line 2797
1199 eval on Page 73, Line 2903
1200 exec on Page 75, Line 2962
1201 exit on Page 77, Line 3023
1202 export on Page 79, Line 3092
1203 readonly on Page 82, Line 3166
1204 return on Page 83, Line 3219
1205 set on Page 88, Line 3382
1206 shift on Page 91, Line 3516
1207 times on Page 93, Line 3570
1208 trap on Page 96, Line 3656
1209 unset on Page 98, Line 3742
1210 Change from:
       "None."
1211
1212 to:
1213
       "The standard error shall be used only for diagnostic messages."
1214 In the CONSEQUENCES OF ERRORS sections of the following utilities:
1215 break on Page 65, Line 2689
1216 colon on Page 67, Line 2747
1217 continue on Page 69, Line 2806
1218 dot on Page 71, Line 2859
1219 eval on Page 73, Line 2913
1220 exec on Page 76, Line 2974
1221 exit on Page 77, Line 3034
1222 export on Page 80, Line 3100
1223 readonly on Page 82, Line 3174
1224 return on Page 83, Line 3230
1225 set on Page 88, Line 3390
1226 shift on Page 91, Line 3524
1227 times on Page 93, Line 3578
1228 trap on Page 96, Line 3666
1229 unset on Page 99, Line 3751
1230 Change from:
1231
       "None."
1232 to:
       "Default."
1233
1234 Rationale: Many changes to use terms as described in the Utility
1235 Description Defaults. No change in behavior is intended.
```

```
1236 Change Number: XCU/TC1/D6/6 [XCUft2 ERN 1]
1237 On Page: 79 Line: 3061 Section: export
1238 In the DESCRIPTION, add to the end of the first paragraph:
      "If the name of a variable is followed by =word, then the value of that
      variable shall be set to word."
1241 Rationale: The SYNOPSIS for export includes export name[=word]...
1242 but the meaning of the optional "=word" is never explained in the text.
1243 [Editorial Note: The term "word" is in italics.]
1244 Change Number: XCU/TC1/D6/7 [XCUft2 ERN 1]
1245 On Page: 81 Line: 3135 Section: readonly
1246 In the DESCRIPTION, add to the end of the first paragraph:
1247
       "If the name of a variable is followed by =word, then the value of that
       variable shall be set to word."
1249 Rationale: The SYNOPSIS for readonly includes readonly name[=word]...
1250 but the meaning of the optional "=word" is never explained in the text.
1251 [Editorial Note: The term "word" is in italics.]
1252 Change Number: XCU/TC1/D6/8 [XCUft2 ERN 2]
1253 On Page: 90 Line: 3467 Section: set
1254 In the RATIONALE section, change the square brackets on Line 3467:
       notify [%job ...]
1256 to be in bold; that is, the typeface used for "Optional Items
1257 in Utility Syntax".
1258 Rationale: The square brackets are supposed to denote an optional
1259 argument in this example.
1260 Change Number: XCU/TC1/D6/9 [XCUft2 ERN 3]
1261 On Page: 93 Line: 3545-3546 Section: times
1262 In the DESCRIPTION, change from:
      "Write the accumulated user and system times for the shell and for all
     of its child processes ..."
1265 to:
1266
       "The times utility shall write the accumulated user and system times
       for the shell and for all of its child processes ...!
1268 Change Number: XCU/TC1/D6/10 [XCUft2 ERN 4]
1269 On Page: 134 Line: 5023,5028 Section: ar
1270 In the SYNOPSIS, change Line 5023 from:
1271 ar -m[-abiv][posname] archive file ...
```

```
1272 to:
       ar -m [-v] archive file ...
1274
       ar -m -a [-v] posname archive file ...
1275
      ar -m -b [-v] posname archive file ...
       ar -m -i [-v] posname archive file ...
1277 Change Line 5028 from:
       ar -r[-cuv][-abi][posname]archive file ...
1278
1279 to:
      ar -r [-cuv] archive file ...
1280
      [XSI] ar -r -a [-cuv] posname archive file ...
1282
       ar -r -b [-cuv] posname archive file ...
       ar -r -i [-cuv] posname archive file ...[/XSI]
1283
1284 Rationale: The -a, -b, and -i options are mutually-exclusive, and
1285 posname is required if any of these options is specified.
1286 Change Number: XCU/TC1/D6/11 [XCUft3 ERN 1]
1287 On Page: 139 Line: 5246 Section: ar
1288 In the RATIONALE section, change from:
1289
        "The two-byte trailer is the string "<newline>"."
1290 to:
1291
        "The two-byte trailer is the string "`<newline>"."
1292 Rationale: The description of the 4.4BSD archive format states
1293 incorrectly that each header ends with the two-byte trailer "<newline>".
1294 This is incorrect; the trailer is a backquote followed by a <newline>
1295 as per IEEE Std 1003.2-1992.
1296 Change Number: XCU/TC1/D6/12 [XCUft2 ERN 5]
1297 On Page: 214 Line: 8324-8339 Section: c99
1298 In the EXTENDED DESCRIPTION, Page 214, Lines 8324-8332, change from:
1299
       -1 c
              This operand shall make visible all functions referenced in
1300
               the System Interfaces volume of IEEE Std 1003.1-2001, with
1301
               the possible exception of those functions listed as residing
1302
              in <aio.h>, <arpa/inet.h>, <math.h>, <mqueue.h>, <netdb.h>,
1303
               <netinet/in.h>, <pthread.h>, <sched.h>, <semaphore.h>, <spawn.h>,
1304
               <sys/socket.h>, pthread kill(), and pthread sigmask() in
1305
               <signal.h>, <trace.h>, functions marked as extensions other than
1306
              as part of the MF or MPR extensions in <sys/mman.h>, functions
1307
              marked as ADV in <fcntl.h>, and functions marked as CS, CPT,
1308
              and TMR in <time.h>. This operand shall not be required to be
1309
              present to cause a search of this library.
1310 to:
1311
      -1 c
              This operand shall make visible all functions referenced in
1312
               the System Interfaces volume of IEEE Std 1003.1-2001, with
1313
               the possible exception of those functions listed as residing
               in <aio.h>, <arpa/inet.h>, <complex.h>, <fenv.h>, <math.h>,
1314
1315
               <mqueue.h>, <netdb.h>, <netinet/in.h>, <pthread.h>, <sched.h>,
1316
               <semaphore.h>, <spawn.h>, <sys/socket.h>, pthread_kill(), and
               pthread_sigmask() in <signal.h>, <trace.h>, functions marked
1317
              as extensions other than as part of the MF or MPR extensions in
1318
              <sys/mman.h>, functions marked as ADV in <fcntl.h>, and functions
1319
1320
               marked as CS, CPT, and TMR in <time.h>. This operand shall not
1321
              be required to be present to cause a search of this library.
```

```
1322 In the EXTENDED DESCRIPTION on Page 214, Lines 8338-8339, change from:
       -1 m This operand shall make visible all functions referenced in
1324
              <math.h>. An implementation may search this library in the
1325
              absence of this operand.
1326 to:
       -1 m This operand shall make visible all functions referenced in
              <math.h>, <complex.h>, and <fenv.h>. An implementation may
1328
1329
              search this library in the absence of this operand.
1330 Rationale: Integration of ISO C99 math headers.
1331 Change Number: XCU/TC1/D6/13 [XCU ERN 6]
1332 On Page: 215 Line: 8355 Section: c99
1333 In the EXTENDED DESCRIPTION on Page 215, Lines 8355-8356, change from:
1334
       "It is unspecified whether the libraries libc.a, libm.a, librt.a,
       libpthread.a, libl.a, liby.a, or libxnet exist as regular files."
1335
1336 to:
1337
        "It is unspecified whether the libraries libc.a, libm.a, librt.a,
1338
       libpthread.a, libl.a, liby.a, or libxnet.a exist as regular files."
1339 Rationale: The reference to the libxnet library should be libxnet.a.
1340 Change Number: XCU/TC1/D6/14 [XCUft2 ERN 7]
1341 On Page: 226 Line: 8736 Section: cd
1342 In the SYNOPSIS, change from:
1343
     cd [-L] [-P] [directory]
1344 to:
1345 cd [-L|-P] [directory]
1346 Rationale: The options -L and -P are mutually-exclusive.
1347 Change Number: XCU/TC1/D6/15 [XCU ERN 2]
1348 On Page: 233 Line: 9027 Section: chgrp
1349 In the SYNOPSIS, change from:
1350
     chgrp -hR group file ...
1351 to:
1352
       chgrp [-hR] group file ...
1353 Rationale: The SYNOPSIS does not show options as optional.
1354 Change Number: XCU/TC1/D6/16 [XCUft3 ERN 2]
1355 On Page: 238 Line: 9245-9248 Section: chmod
1356 Change from:
1357
        "The perm symbol t shall specify the S ISVTX bit and shall apply to
1358
       directories only. The effect when using it with any other file type is
```

```
1359
        unspecified. It can be used with the who symbols o, a, or with no who
1360
        symbol. It shall not be an error to specify a who symbol of u or g in
        conjunction with the perm symbol t; it shall be ignored for u and g."
1361
1362 to:
        "The perm symbol t shall specify the S_ISVTX bit. When used with a file
       of type directory, it can be used with the who symbol a, or with no
       who symbol. It shall not be an error to specify a who symbol of u, g,
1365
       or o in conjunction with the perm symbol t, but the meaning of these
1366
       combinations is unspecified. The effect when using the perm symbol
1367
1368
     t with any file type other than directory is unspecified."
1369 Rationale: This change is to permit existing behavior.
1370 Change Number: XCU/TC1/D6/17 [XCU ERN 3]
1371 Page: 242 Line: 9389 Section: chown
1372 In the SYNOPIS, change from:
1373
      chown -hR owner[:group] file ...
1374 to:
1375
       chown [-hR] owner[:group] file ...
1376 Rationale: The SYNOPSIS does not show options as optional.
1377 Change Number: XCU/TC1/D6/18 [XCU ERN 4]
1378 On Page: 272 Line: 10587 Section: cp
1379 In the SEE ALSO section, change from:
1380
       "the *(Zy"
1381 to:
1382
      "the System Interfaces Volume of IEEE Std 1003.1-2001"
1383 Change Number: XCU/TC1/D6/19 [XCU ERN 5]
1384 On Page: 299 Line: 11588-11592 Section: date
1385 In the CHANGE HISTORY section, change from:
        "The following new requirements on POSIX implementations derive
1386
       from alignment with the Single UNIX Specification:
1387
1388
        - The setting of system date and time is described, including how
         to interpret two-digit values if a century is not given.
1389
1390
       - The %EX modified conversion specification is added."
1391 to:
1392
       "The following new requirement on POSIX implementations derives
       from alignment with the Single UNIX Specification:
1393
1394
       - The %EX modified conversion specification is added."
1395 Change Number: XCU/TC1/D6/20 [XCUft4 ERN 2]
1396 On Page: 320 Line: 12320-12321 Section: diff
1397 In the STDOUT section, change Lines 12320-12321 to read:
```

```
1398
        "Next, the range of lines in file1 shall be written in the following
1399
        format if the range contains two or more lines:
        "*** %d,%d ****\n", <beginning line number>, <ending line number>
1400
        and the following format otherwise:
1401
        "*** %d ****\n", <ending line number>
1402
       The ending line number of an empty range shall be the number of the
1403
1404
       preceding line, or 0 if the range is at the start of the file."
1405 In the STDOUT section, change Lines 12329-12330 to read:
1406
        "Next, the range of lines in file2 shall be written in the following
1407
        format if the range contains two or more lines:
1408
        "--- %d,%d ----\n", <beginning line number>, <ending line number>
1409
        and the following format otherwise:
       "--- %d ----\n", <ending line number>"
1410
1411 Rationale: The previous specification for the behavior for 'diff -c'
1412 did not agree with existing practice when contexts contain zero lines
1413 or one line.
1414 Change Number: XCU/TC1/D6/21 [Defect raised at May 2002 Plenary]
1415 On Page: 331 Line: 12688-12691- Section: echo
1416 In the OPERANDS section, change from:
     "If any operand is -n, it shall be treated as a string, not an option."
1418 to:
1419
       "If the first operand is -n, or if any of the operands contain a
       backslash (\) character, the results are implementation-defined."
1421 On Line 12691, change from:
        "The following character sequences shall be recognized within
       any of the arguments:"
1423
1424 to (as separate paragraph):
        \hbox{\tt "[XSI]On XSI-conformant systems:} If the first operand is -n, it shall be
1426
        treated as a string, not an option. The following character sequences
1427
        shall be recognized on XSI-conformant systems within any of the
1428
        arguments:"
1429 Extend the shading down to and including Line 12705.
1430 In the ENVIRONMENT VARIABLES section, mark the LC CTYPE environment
1431 variable on Lines 12718-12720 with the XSI margin code and shade.
1432 In the STDOUT section, mark the sentence beginning on Line 12729 with
1433 the XSI margin code and shade:
1434
        "Output transformations shall occur based on the escape sequences in
1435
       the input. See the OPERANDS section."
1436 In the APPLICATION USAGE section, change the first paragraph from:
     "In the ISO/IEC 9945:1993 standard, ... omitted."
1438 to:
```

```
1439
        "It is not possible to use echo portably across all POSIX systems unless
1440
       both -n (as the first argument) and escape sequences are omitted."
1441 Change Line 12749 from:
1442
        "The historic System V echo and the current requirements
       in this volume of IEEE Std 1003.1-2001 are equivalent to:"
1443
1444 to:
1445
        "The historic System V echo and the requirements on XSI implementations
1446
       in this volume of IEEE Std 1003.1-2001 are equivalent to:"
1447 In the RATIONALE (Line 12772), change from:
1448
        "The System V echo does not support any options, but allows escape
1449
        sequences within its operands, as described in the OPERANDS section."
1450 to:
1451
        "The System V echo does not support any options, but allows escape
       sequences within its operands, as described for XSI implementations in
       the OPERANDS section."
1453
1454 Rationale: Revert to accommodate historical BSD behavior.
1455 Change Number: XCU/TC1/D6/22 [XCUft4 ERN 3]
1456 On Page: 340 Line: 13069 Section: ed
1457 In the EXTENDED DESCRIPTION section, Interactive Global Command, after:
       "Note that the commands input as part of the execution of the
1458
      G command can address and affect any line in the buffer."
1459
1460 Add:
       "Any line modified by the command shall be unmarked."
1461
1462 Rationale: A problem with the description of the ed "g" command was
1463 fixed in the revision by adding the text: "Any line modified by the
1464 command list shall be unmarked." It was an oversight to not do that
1465 here also.
1466 Change Number: XCU/TC1/D6/23 [XCUft3 ERN 3]
1467 On Page: 398 Line: 15344 Section: ex
1468 In the RATIONALE section, change from:
      "ftp://ftp.rdg.opengroup/pub/mirrors/nvi"
1469
1470 to:
1471
       "ftp://ftp.rdg.opengroup.org/pub/mirrors/nvi"
1472 Rationale: Correct an invalid URL.
1473 Change Number: XCU/TC1/D6/24 [XCUft2 ERN 10]
1474 On Page: 432 Line: 16698 Section: false
1475 In the STDERR section, change from:
1476
     "None."
1477 to:
```

```
1478
       "Not Used."
1479 Rationale: Section 1.11 (Utility Description Defaults, Page 24,
1480 Lines 979-998) does not provide a meaning for "None".
1481 Change Number: XCU/TC1/D6/25 [XCUft2 ERN 11]
1482 On Page: 442-447 Line: 17024-17248 Section: file
1483 A large number of changes should be made to this reference page
1484 as follows:
1485 On Page 442, Line 17024, SYNOPSIS, change to:
1486
        file [-dh] [-M file] [-m file] file ...
1487
        file -i [-h] file ...
1488 with both lines shaded with the UP marking.
1489 On Page 442, Lines 17027-17039, DESCRIPTION, replace with:
1490
        "The file utility shall perform a series of tests in sequence on each
1491
        specified file in an attempt to classify it:
1492
       1. If file does not exist, cannot be read, or its file status could
1493
           not be determined, the output shall indicate that the file was
1494
            processed, but that its type could not be determined.
        2. If the file is not a regular file, its file type shall be
1495
1496
           identified. The file types directory, FIFO, socket, block
1497
            special, and character special shall be identified as such.
            Other implementation-defined file types may also be identified.
1498
1499
           If file is a symbolic link, by default the link shall be
1500
           resolved and file shall test the type of file referenced by the
1501
           symbolic link. (See the -h and -i options below.)
1502
      3. If the length of file is zero, it shall be identified as an
1503
           empty file.
       4. The file utility shall examine an initial segment of file and
1504
1505
           shall make a guess at identifying its contents based on position-
1506
            sensitive tests. (The answer is not guaranteed to be correct.
1507
           See the -d, -M, and -m options below.)
       5. The file utility shall examine file and make a guess at
1508
1509
            identifying its contents based on context-sensitive default
1510
            system tests. (The answer is not guaranteed to be correct.)
1511
       6. The file shall be identified as a data file."
1512 On Page 442, Line 17044, OPTIONS, change the description of the -d
1513 Option to:
1514
        -d
                 Apply any position-sensitive default system tests and
1515
                 context-sensitive default system tests to the file.
1516
                 This is the default if no -M nor -m option is specified.
1517 On Page 442, Lines 17048-17060, change the description of the -i, -M,
1518 and -m options, and the interactions between options, to:
1519
                 If a file is a regular file, do not attempt to classify the
1520
                 type of the file further, but identify the file as specified
1521
                 in the STDOUT section.
1522
       -M file Specify the name of a file containing position-sensitive tests
1523
                 that shall be applied to a file in order to classify it (see
1524
                 the EXTENDED DESCRIPTION). No position-sensitive default
1525
                 system tests nor context-sensitive default system tests shall
1526
                be applied unless the -d option is also specified.
1527
        -m file Specify the name of a file containing position-sensitive tests
                 that shall be applied to a file in order to classify it (see
1528
1529
                 the EXTENDED DESCRIPTION).
       If the -m option is specified without specifying the -d option or the
1530
```

```
-M option, position-sensitive default system tests shall be applied
        after the position-sensitive tests specified by the -m option. If the
1533
        -M option is specified with the -d option, the -m option, or both,
        or the -m option is specified with the -d option, the concatenation
1534
1535
       of the position-sensitive tests specified by these options shall be
1536
        applied in the order specified by the appearance of these options.
       If a -M or -m file option-argument is -, the results are unspecified.
1537
1538 On Pages 443-444, Lines 17089-17115, STDOUT, change the text to:
        "The values for <type> are unspecified, except that in the POSIX locale,
1540
        if file is identified as one of the types listed in the following
1541
        table, <type> shall contain (but is not limited to) the corresponding
1542
        string, unless the file is identified by a position sensitive test
1543
        specified by a -M or -m option. Each space shown in the strings shall
1544
       be exactly one <space>."
       Table 4-8: File Utility Output Strings
1545
1546
        If file is:
                                                                       Notes
                                                  <type> shall
1547
                                                  contain the string:
1548
       Nonexistent
                                                  cannot open
1549
       Block special
                                                  block special
1550
       Character special
                                                  character special
                                                  directory
1551
       Directory
                                                                        1
1552
       FIFO
                                                  fifo
                                                                        1
1553
       Socket
                                                  socket
1554
       Symbolic link
                                                  symbolic link to
                                                                        1
1555
        Regular file
                                                  regular file
                                                                        1,2
       Empty regular file
1556
                                                  empty
                                                                        3
1557
       Regular file that cannot be read
                                                 cannot open
                                                                        3
1558
      Executable binary
                                                 executable
                                                                        4,6
       ar archive library (see ar)
1559
                                                                        4,6
       Extended cpio format (see pax)
1560
                                                 cpio archive
                                                                        4,6
       Extended tar format (see ustar in pax)
1561
                                                  tar archive
                                                                        4,6
1562
      Shell script
                                                  commands text
                                                  c program text
1563
       C-language source
                                                                        5.6
                                                  fortran program text 5,6
1564
       FORTRAN source
1565
      Regular file whose type cannot be
1566
           determined
                                                  data
1567
       Notes:

    This is a file type test.
    This test is applied only if the -i option is specified.

1568
1569
1570
       3. This test is applied only if the -i option is not specified.
        4. This is a position-sensitive default system test.
1571
       5. This is a context-sensitive default system test.6. Position-sensitive default system tests and context-sensitive
1572
1573
1574
            default system tests are not applied if the -M option is
1575
            specified unless the -d option is also specified.
1576
       In the POSIX locale, if file is identified as a symbolic link (see the
1577
       -h option), the following alternative output format shall be used:
1578
        "%s: %s %s\n", <file>, <type>, <contents of link>"
1579
        If the file named by the file operand does not exist, cannot be read,
        or the type of the file named by the file operand cannot be determined,
1580
       this shall not be considered an error that affects the exit status.
1582 On Page 444, Line 17121, EXTENDED DESCRIPTION, change:
      "one test per line"
1583
1584 to:
```

```
1585
        "one position-sensitive test per line"
1586 On Page 446, Lines 17223-17225, APPLICATION USAGE, add to the end of
1587 the paragraph:
1588
        "Note also that on systems that recognize shell script files starting
1589
        with "#!" as executable files, these may be identified as executable
1590
       binary files rather than as shell scripts."
1591 On Page 447, after Line 17248, RATIONALE, add new paragraphs as follows:
1592
        "The IEEE Std 1003.1-2001 description of default system tests and the
        interaction between the -d, -M, and -m options did not clearly indicate
1593
        that there were two types of "default system tests". The "position-
1594
        sensitive tests" determine file types by looking for certain string or
1595
1596
       binary values at specific offsets in the file being examined. These
1597
       position-sensitive tests were implemented in historical systems using
1598
        the magic file described above. Some of these tests are now built into
1599
        the file utility itself on some implementations so the output can
1600
       provide more detail than can be provided by magic files. For example,
1601
        a magic file can easily identify a core file on most implementations,
1602
       but can not name the program file that dropped the core. A magic file
       could produce output such as:
1603
        /home/dwc/core: ELF 32-bit MSB core file SPARC Version 1
1604
1605
       but by building the test into the file utility, you could get output
1606
        such as:
1607
        /home/dwc/core: ELF 32-bit MSB core file SPARC Version 1, from 'testprog'
1608
       These extended built-in tests are still to be treated as position-
1609
        sensitive default system tests even if they are not listed in
1610
        /etc/magic or any other magic file.
       The context-sensitive default system tests were always built into the
1612
        file utility. These tests looked for language constructs in text files
1613
        trying to identify shell scripts, C, FORTRAN, and other computer
1614
        language source files, and even plain text files. With the addition of
1615
        the \mbox{-m} and \mbox{-M} options the distinction between position-sensitive and
1616
        context-sensitive default system tests became important because the
1617
        order of testing is important. The context-sensitive system default
1618
        tests should never be applied before any position-sensitive tests even
1619
        if the -d option is specified before a -\mathfrak{m} option or -M option due to
1620
        the high probability that the context-sensitive system default tests
       will incorrectly identify arbitrary text files as text files before
1621
1622
       position-sensitive tests specified by the -m or -M option would be
1623
       applied to give a more accurate identification.
1624
       Leaving the meaning of -M - and -m - unspecified allows an existing
1625
        prototype of these options to continue to work in a backwards-compatible
1626
       manner. (In that implementation, -M - was roughly equivalent to -d in
1627
        this specification.) "
1628 Rationale: The changes applied make the specification unambiguously
1629 describe what was intended.
1630 Change Number: XCU/TC1/D6/26 [XCUft2 ERN 11]
1631 On Page: 442 Line: 17041-17042 Section: file
1632 In the OPTIONS section, change from:
1633
        "The file utility shall conform to the Base Definitions volume of IEEE
1634
        Std 1003.1-2001, Section 12.2, Utility Syntax Guidelines."
1635 to:
1636
        "The file utility shall conform to the Base Definitions volume of IEEE
        Std 1003.1-2001, Section 12.2, Utility Syntax Guidelines, except that
1637
```

```
1638
        the order of the -m, -d, and -M options shall be significant."
1639 Rationale: The -m, -d, and -M options do not comply with Guideline 11
1640 of the Utility Syntax Guidelines.
1641 Change Number: XCU/TC1/D6/27 [XCU ERN 9]
1642 On Page: 482 Line: 18565-18567 Section: getconf
1643 In the OPERANDS section, change from:
        "path var A name of a configuration variable. All of the variables
1645
                   in the pathconf() function defined in the System
1646
                   Interfaces volume of IEEE Std 1003.1-2001 are supported
1647
                   and the implementation may add other local variables."
1648 to:
1649
        "path_var A name of a configuration variable. All of the variables
                   in the Variable column of the table in the description
1650
                   of the fpathconf() function in the System Interfaces
                   volume of IEEE Std 1003.1-2001, without the enclosing
1652
1653
                   braces, shall be supported. The implementation may add
                   other local variables.
1654
1655 On Page 482, Line 18569-18607, getconf, in the OPERANDS section,
1656 change from:
1657
        "system_var A name of a configuration variable. All of the variables
1658
                     in the confstr() and sysconf() functions defined in the
1659
                     System Interfaces volume of IEEE Std 1003.1-2001 shall be
1660
                     supported and the implementation may add ...
1661
                     When the symbol listed in the first column ...
                     {text omitted}
1662
                     XBS LPBIG OFFBIG LINTFLAGS (LEGACY) ..."
1663
1664
     [Editorial Note: This includes removal of the table on Page 483.]
1665 to:
1666
        "system var A name of a configuration variable. All of the following
                     variables shall be supported:
1667
1668
                     - The names in the Variable column of the table in the
1669
                       description of the sysconf() function in the System
1670
                       Interfaces volume of IEEE Std 1003.1-2001 except
1671
                       for the entries corresponding to _SC_CLK_TCK,
1672
                       _SC_GETGR_R_SIZE_MAX, and _SC_GETPW_R_SIZE_MAX,
                       without the enclosing braces.
1673
1674
                       For compatibility with older versions of this
1675
                       specification, the following variable names shall
1676
                       also be supported:
                         POSIX2 VERSION, POSIX2 C BIND, POSIX2 C DEV,
1677
1678
                         POSIX2_CHAR_TERM, POSIX2_FORT_DEV,
1679
                         POSIX2 FORT RUN, POSIX2 LOCALEDEF, POSIX2 SW DEV,
1680
                         POSIX2 UPE
                       and shall be equivalent to the same name prefixed with
1681
1682
                       an underscore. This requirement may be removed in a
1683
                       future revision.
1684
                     - The names of the symbolic constants used as the name
1685
                       argument of the confstr() function in the System
1686
                       Interfaces volume of IEEE Std 1003.1-2001,
                       without the CS prefix.
1687
```

```
1688
                     - The names of the symbolic constants listed under
1689
                       the headings `Maximum Values' and `Minimum Values'
1690
                       in the description of the elimits.h> header in the
1691
                       Base Definitions volume of IEEE Std 1003.1-2001,
1692
                      without the enclosing braces.
1693
                       For compatibility with older versions of this
1694
                       specification, the following variable names shall
1695
                       also be supported:
1696
                        POSIX2_BC_BASE_MAX, POSIX2_BC_DIM_MAX,
                        POSIX2 BC SCALE MAX, POSIX2 BC STRING MAX,
1697
                        POSIX2 COLL WEIGHTS MAX, POSIX2 EXPR NEST MAX,
1698
                        POSIX2 LINE MAX, POSIX2 RE DUP MAX
1699
1700
                       and shall be equivalent to the same name prefixed with
                       an underscore. This requirement may be removed in a
1701
1702
                       future revision.
1703
                     The implementation may add other local values."
1704 Change Number: XCU/TC1/D6/28 [XCU ERN 10]
1705 On Page: 495 Line: 19060,19063 Section: grep
1706 In the EXAMPLES section, Line 19060, change from:
1707
     grep -F 'abc|def'
1708 to:
       grep -F 'abc
1709
1710
       def'
1711 Line 19063, change from:
       grep -F -x 'abc|def'
1712
1713 to:
1714
      grep -F -x 'abc
1715
       def'
1716 Rationale: The examples using the grep -F option do not match the
1717 normative description of the -F option.
1718 Change Number: XCU/TC1/D6/29 [XCU ERN 11]
1719 On Page: 503 Line: 19270-19305 Section: iconv
1720 In the SYNOPSIS, Line 19270, change from:
1721
     iconv [-cs] -f fromcode -t tocode [file ...]
1722 to:
      iconv [-cs] -f frommap -t tomap [file ...]
      iconv -f fromcode [-cs] [-t tocode] [file ...]
       iconv -t tocode [-cs] [-f fromcode] [file ...]
1726 In the DESCRIPTION, Line 19283, change from:
1727
        "Omit any invalid characters from the output."
1728 to:
1729
        "Omit any characters that are invalid in the codeset of the input
     file from the output."
1730
```

```
1731 On Lines 19284-19285, in the -c option description, change from:
        "(either those that are not members of the fromcode or those that
1733
        have no corresponding value in tocode) shall"
1734 to:
1735
        "(either those that are not characters in the codeset of the input
1736
        file or that have no corresponding character in the codeset of the
        output file) shall"
1737
1738 On Lines 19288-19296, the -f fromcode option description, change:
1739
        "-f fromcode
1740
                Identify the codeset of the input file. If the
1741
                option-argument contains a slash character, iconv shall
1742
                attempt to use it as the pathname of a charmap file, as
1743
                defined in the Base Definitions volume of IEEE Std
1744
                1003.1-2001, Section 6.4, Character Set Description File.
1745
                If the pathname does not represent a valid, readable
1746
                charmap file, the results are undefined. If the
1747
                option-argument does not contain a slash, it shall be
1748
                considered the name of one of the codeset descriptions
               provided by the system, in an unspecified format. The
1749
1750
                valid values of the option-argument without a slash are
1751
               implementation-defined. If this option is omitted, the
1752
                codeset of the current locale shall be used."
1753 to:
        "-f fromcodeset
1754
1755
                Identify the codeset of the input file. The implementation
1756
                shall recognize the following two forms of the fromcodeset
1757
                option-argument:
1758
                fromcode
                           The fromcode option-argument must not contain a
1759
                           slash character. It shall be interpreted as
                           the name of one of the codeset descriptions
1760
1761
                           provided by the implementation in an
1762
                           unspecified format. Valid values of fromcode
1763
                           are implementation-defined.
1764
                frommap
                           The frommap option-argument must contain a
1765
                           slash character. It shall be interpreted as
1766
                           the pathname of a charmap file as defined in
                           the Base Definitions volume of IEEE Std
1767
1768
                           1003.1-2001, Section 6.4, Character Set
1769
                           Description File. If the pathname does not
                           represent a valid, readable charmap file, the
1770
1771
                           results are undefined.
1772
                If this option is omitted, the codeset of the current locale
1773
                shall be used."
1774 On Lines 19301-19302, in the -s option description, change:
        "stream (either those that are not valid members of the fromcode or
1776
         those that have no corresponding value in tocode) shall be specified
1777
         in the system documentation."
1778 to:
1779
        "stream (either those that are not valid characters in the codeset
1780
        of the input file or that have no corresponding character in the
1781
         codeset of the output file) shall be specified in the system
1782
         documentation."
1783 On Lines 19304-19305, the -t fromcode option description, change from:
1784
        "-t tocode
1785
                Identify the codeset to be used for the output file. The
```

```
1786
                semantics shall be equivalent to the -f fromcode option."
1787 to:
       "-t tocodeset
1788
1789
                Identify the codeset to be used for the output file. The
1790
                implementation shall recognize the following two forms of the
1791
                tocodeset option-argument:
1792
                tocode
                          The semantics shall be equivalent to the -f
                          fromcode option.
1793
1794
                tomap
                          The semantics shall be equivalent to the
                          tomap option.
1795
1796
                If this option is omitted, the codeset of the current locale
1797
                shall be used."
1798 Rationale: Inconsistencies with the iconv() function.
1799 Change Number: XCU/TC1/D6/30 [XCUft2 ERN 12]
1800 On Page: 551 Line: 21146 Section: locale
1801 In the STDOUT section, change from:
1802
        "%s=\""%s\""\n",
1803 to:
1804
        "%s=\"%s\"\n",
1805 Change Number: XCU/TC1/D6/31 [XCU ERN 15]
1806 On Page: 581 Line: 22337-22361 Section: m4
1807 In the EXAMPLES section, replace the entire section with the following:
1808
      If the file m4src contains the lines:
            The value of `VER' is "VER". ifdef(`VER', ``VER'' is defined to be VER., VER is not defined.)
1809
1810
            ifelse(VER, 1, `VER'' is VER'.)
ifelse(VER, 2, `VER'' is `VER'., `VER'' is not 2.)
1811
1812
1813
            end
1814
        then the command:
1815
            m4 m4src
1816
        or the command:
1817
            m4 -U VER m4src
1818
        produces the output:
            The value of VER is "VER".
1819
            VER is not defined.
1820
1821
            VER is not 2.
1822
            end
1823
        The command:
            m4 -D VER m4src
1824
1825
        produces the output:
1826
            The value of VER is "".
1827
            VER is defined to be .
```

```
VER is not 2.
1828
1829
            end
1830
       The command:
            m4 -D VER=1 m4src
1831
1832
       produces the output:
           The value of VER is "1".
1833
           VER is defined to be 1.
1834
1835
            VER is 1.
1836
           VER is not 2.
1837
            end
1838
       The command:
1839
            m4 -D VER=2 m4src
1840
       produces the output:
            The value of VER is "2".
1841
1842
            VER is defined to be 2.
1843
           VER is 2.
1844
            end
1845 [Editorial Note: All double quotes, grave accents, and acute accents in
1846 the above must remain as those characters. In this context, the pairs
1847 of acute and grave accents are very different from opening and closing
1848 double quotes. The blank lines in the example output sections are also
1849 VERY important.]
1850 Change Number: XCU/TC1/D6/32 [XCUft2 ERN 13]
1851 On Page: 593 Line: 22848-22852 Section: mailx
1852 In the EXTENDED DESCRIPTION, change from:
1853
        "Filenames, where expected, shall be subjected to the process of shell
       word expansions (see Section 2.6 (on page 36)); if more than a single
1855
       pathname results and the command is expecting one file, the effects
1856
        are unspecified. If the filename begins with an unquoted plus sign,
        it shall not be expanded, but treated as the named file (less the
1857
1858
       leading plus) in the folder directory. (See the folder variable.)"
1859 to:
1860
       "Filenames, where expected, shall be subjected to the following
1861
       transformations, in sequence:
1862
          If the filename begins with an unquoted plus sign, and the
1863
         folder variable is defined (see the folder variable), the
1864
         plus sign shall be replaced by the value of the folder
1865
         variable followed by a slash. If the folder variable is unset
1866
         or is set to null, the filename shall be unchanged.
1867
         Shell word expansions shall be applied to the filename (see
          Section 2.6 (on page 36)). If more than a single pathname
1868
1869
         results from this expansion and the command is expecting one
1870
         file, the effects are unspecified."
1871 Rationale: IEEE PASC Interpretation 1003.2-1992 #122 identified a
1872 correction to be made in the 2001 revision, but the change was
1873 overlooked.
```

```
1874 Change Number: XCU/TC1/D6/33 [XCU ERN 12]
1875 On Page: 680 Line: 26205 Section: od
1876 In the EXAMPLES section, change from:
     "od -A o -t o2x2x -n 18"
1878 to:
     "od -A o -t o2x2x -N 18"
1879
1880 On Page 681, Line 26216, Section od, change from:
       "od -A d -t f -t o4 -t x4 -n 24 -j 0x15"
1881
1882 to:
1883
       "od -A d -t f -t o4 -t x4 -N 24 -j 0x15"
1884 Rationale: Some of the examples for od use an undefined "-n" option.
1885 This should have been "-N".
1886 Change Number: XCU/TC1/D6/34 [XCUft4 ERN 5]
1887 On Page: 688 Line: 26489 Section: patch
1888 On Line 26489, OPTIONS, add the following to the -D define option text:
       "If the patched file is processed with the C preprocessor, where the
1890
       macro "define" is defined, the output shall contain the changes from
1891
       the patch file; otherwise, the output shall not contain the patches
1892
       specified in the patch file."
1893 Rationale: The description of the patch -D option previously did not
1894 indicate which way round the ifdef selection should be.
1895 Change Number: XCU/TC1/D6/35 [XCUft4 ERN 6]
1896 On Page: 701 Line: 27030-27065 Section: pax
1897 In the OPTIONS section, -o option, Line 27042, change the table entry
1898 from:
1899
       %% A '%' character.
1900 to:
1901
       %р
            The process ID of the pax process.
           A '%' character.
1902
       응응
1903 On Line 27046, change from:
1904
       %d/PaxHeaders/%f
1905 to:
1906
     %d/PaxHeaders.%p/%f
1907 On Page 702, Line 27059, change the table entry from:
1908
     %% A '%' character.
1909 to:
       %p The process ID of the pax process.
%% A '%' character.
1910
1911
```

```
1912 On Line 27063, change from:
1913
     $TMPDIR/GlobalHead.%n
1914 to:
1915 $TMPDIR/GlobalHead.%p.%n
1916 Rationale: Previously there was no way for the implementation
     (or the user) to ensure that different instances of pax extracting
1918 a file named "/a/b/foo" will not collide when processing the extended
1919 header information associated with "foo".
1920 Change Number: XCU/TC1/D6/36 [XCUft4 ERN 7]
1921 On Page: 703 Line: 27119-27122 Section: pax
1922 In the OPTIONS section, Lines 27119 and 27122, change from:
1923 "-x B"
1924 to:
1925 "-x pax"
1926 Change Number: XCU/TC1/D6/37 [XCUft2 ERN 16]
1927 On Page: 887 Line: 34262 Section: stty
1928 In the OPERANDS section, change from:
1929
     "Enable (disable) icrnl"
1930 to:
1931
       "Disable (enable) icrnl"
1932 Rationale: IEEE PASC Interpretation 1003.2-1992 #133 identified an
1933 error in the description of "stty nl", but the fix was overlooked in
1934 the revision.
1935 Change Number: XCU/TC1/D6/38 [XCU ERN 13]
1936 On Page: 906 Line: 34938 Section: test
1937 In the OPERANDS section, add the XSI margin mark and shading to:
1938 "If $1 is '(' and $3 is ')', perform the unary test of $2."
1939 Rationale: This line relates to the use of parentheses as arguments
1940 to "test", so the line should be marked XSI.
1941 Change Number: XCU/TC1/D6/39 [XCUft2 ERN 17,18]
1942 On Page: 929 Line: 35818,35820,35822,35824 Section: true
1943 In the STDERR section, change from:
     "None."
1944
1945 to:
     "Not used."
1946
1947 In the EXIT STATUS section, change from:
1948
       "Default."
```

```
1949 to:
1950
     "Zero."
1951 Rationale: The terms "None" and "Default" do not have defined
1952 meanings in the appropriate sections of Section 1.11, Utility
1953 Description Defaults.
1954 Change Number: XCU/TC1/D6/40 [XCU ERN 14]
1955 On Page: 957 Line: 36795,36811,36814 Section: uniq

# 5. Changes to Rationale

This section contains the set of changes to the original text of the Rationale.

```
1979 Change Number: XRAT/TC1/D6/1 [XRAT ERN 1]
1980 On Page: 11 Line 338 Section: A.2.1.5
1981 Change from:
        "Options Groupsc"
1982
1983 to:
1984
        "Option Groups"
1985 Change Number: XRAT/TC1/D6/2 [XRAT ERN 1]
1986 On Page: 13 Line: 439-440 Section: A.3 (Native Implementation)
1987 Change from:
1988
        "these are marked prefixed with an asterisk"
1989 to:
1990
       "these are marked suffixed with an asterisk"
1991 On Page 23, Line 842, change from:
1992
       "see also {hosted implementation} and {cooperating implementation}."
1993 to:
1994
       "see also {hosted implementation}."
1995 Change Number: XRAT/TC1/D6/3 [Defect raised at May 2002 Plenary]
1996 On Page: 50 Line: 1986 Section: B.7.3.3
1997 Add the following text:
1998
       "Technical Corrigendum Number 1 adds a correction that permits the
       Euro currency symbol and addresses extensibility. The correction is
1999
       stated using the term "should" intentionally, in order to make this
2000
2001 a recommendation rather than a restriction on implementations. This
2002 allows for flexibility in implementations on how they handle future
2003 currency symbol additions."
2004 Change Number: XRAT/TC1/D6/4 [XRAT ERN 2]
2005 On Page: 98 Line: 3848 Section: B.2.4.2 (Realtime Signal Generation
2006 and Delivery)
2007 Change from:
2008
       "SIGEV_NOTIFY"
2009 to:
2010
       "SIGEV THREAD"
```

```
2011 Change Number: XRAT/TC1/D6/5 [XRAT ERN 3]
2012 On Page: 100 Line: 3971 Section: B.2.4.2 (Realtime Signal Generation
2013 and Delivery)
2014 Change from:
     "standard signals in the process signal mask and in the sa mask
2016 installed by the signal"
2017 to:
       "standard signals in the thread signal mask and in the sa mask
      installed by the signal"
2019
2020 On Page 209, Line 8698, Section B.3.1 (Examples for Spawn), change from:
2021
       "/* Worry about process signal mask */"
2022 to:
2023 "/* Worry about thread signal mask */"
2024 Change Number: XRAT/TC1/D6/6 [XRAT ERN 4]
2025 On Page: 263 Line: 10846 Section: C.4 (Exclusion of Utilities)
2026 Delete Lines 10846 and 10847.
2027 Rationale: The commentary about tsort being excluded is incorrect.
2028 It is an XSI utility.
```
